The 2nd January, 2006.

No.PER.6/97/80 – In pursuance of Sub-Rule (2) of Rule 6 of the MCS Rules, 1975 and also with the approval of the Cabinet, the Governor of Meghalaya is please to order that the following Syllabus for Civil Services Examinations and pattern of examination be followed for the combined competitive examination for the MCS and MPS for general information.

**Syllabus for the combined MCS & MPS competitive Examination**

The Competitive examination comprises of two examinations Preliminary and Main Examination/Interview.

**PART – A**

The Preliminary Examination will consist of two papers as follows :-

<table>
<thead>
<tr>
<th>Paper I</th>
<th>General Studies</th>
<th>150 marks.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Paper II</td>
<td>One subject to be selected from the list of optional subjects</td>
<td>300 marks.</td>
</tr>
<tr>
<td>Total</td>
<td></td>
<td>450 marks.</td>
</tr>
</tbody>
</table>

**List of Optional subjects :-**

Detailed Syllabus :-

Part B of the Syllabus is at Page 57
Compulsory Subject

Compulsory Subject – General Studies
of Part A – Preliminary Examination of Civil Services Exam

General Science
Current events of national and international importance
History of India and Indian National Movement
Indian and World Geography
Indian Polity and Economy
General Mental Ability

Questions on General Science will cover general appreciation and understanding of science including matters of everyday observation and experience, as may be expected of a well educated person who has not made a special study of any particular scientific discipline. In current events, knowledge of significant national and international events will be tested. In History of India, emphasis will be on broad general understanding of the subject in its social, economics, and political aspects. Questions of the Indian National Movement will relate to the nature and character of the nineteenth century resurgence, growth of nationalism and attainment of the Independence. In Geography, emphasis will be on Geography of India. Questions of the Geography of India will relate to physical, social and economic Geography of the country, including the main features of Indian agricultural and natural resources. Questions on Indian Polity and Economy will test knowledge of the country’s political system and Constitution of India, Panchayati Raj, Social Systems and economic developments in India. On general mental ability, the candidates will be tested on reasoning and analytical abilities.
Agriculture

Agriculture - Optional
of Part A – Preliminary Examination of Civil Services Exam

Agriculture, its importance in national economy. Factors determining agro-ecological zones and geographic distribution of crop plants.

Importance of crop plants, cultural practices for cereal, pulses, cultural practices for cereal, pulses, oilseed, fibre, sugar, tuber and fodder crops and scientific basis for these crop rotations, multiple and relay cropping, intercropping and mixed cropping.

Principles of plant physiology with reference to plant nutrition, absorption, transaction, and metabolism of nutrients.

Diagnosis of nutrient deficiencies and their amelioration photosynthesis and respiration, growth and development, auxins and hormones in plant growth.

Important fruit and vegetable crops of India, method of propagation-Sexual and asexual. Package and practices and their scientific basis. Crop rotation, intercropping, companion crops, role of fruits and vegetables in human nutrition, post-harvest handling and processing of fruits and vegetables. Landscaping and ornamental horticulture, commercial floriculture. Medicinal and aromatic plants. Serious pests and diseases affecting major crops. Principles of control of crop pests and diseases, integrated management. Proper use and maintenance of plant protection equipment.

Principles of economics as applied to agriculture. Farm planning and optimum resource-use efficiency and maximising income and employment. Farm systems and their spatial distribution, their significant roles in regional economic development.
Animal Husbandry and Veterinary Science

Optional

of Part A – Preliminary Examination of Civil Services Exam

Animal Husbandry

5. **Animal Production**: (a) Artificial insemination, fertility and sterility. Reproductive physiology, semen characteristics and preservation. Sterility its causes and remedies.

(b) Meat eggs and wool production. Methods of slaughter of meat animals, meat inspection, judgement, carcass characteristics; adulteration and its detection processing and preservation; Meat products, quality control and nutritive value, By-products. Physiology of egg production, nutritive value, grading of eggs preservation and marketing.

Types of wool, grading and marketing.

6. **Veterinary Science**: (i) Major contagious diseases affecting cattle, buffaloes, horses, sheep and goats, pigs, poultry, rabbits and pet animals-Etiology, symptoms, pathogenicity, diagnosis, treatment and control of major bacterial, viral, rickettsial and parasitic infections.
Animal Husbandry and Veterinary Science

(ii) Description, symptoms, diagnosis and treatment of the following :-

(a) Production diseases of mitch animals, pig and poultry.
(b) Deficiency diseases of domestic livestock and birds.
(c) Poisonings due to infected/contaminated foods and feeds, chemicals and drugs.

Zoonoses, Foodborne infections and intoxications, occupation hazards.

8. (a) Poisons used for killing animals euthanasia.

(b) Drugs used for increasing production/performance efficiency, and their adverse effects.

(c) Drugs used to tranquilize wild animals as well as animals in captivity.

(d) Quarantine measures in India and abroad. Act, Rules and Regulations.

9. **Dairy Science**: Physiochemical and nutritional properties of milk.

Unit operations in dairy plant.

Role of micro organism in quality of milk and products physiology of milk secretion.
1. **Cell Biology**: Structure and function of cell wall (extracellular matrix or ECM), cell membrane and cell organelles. Nucleus, nucleolus, nuclear pore complex (NPC), chromosome and nucleosome. Mitosis, meiosis, molecular control involving checkpoints in cell division cycle. Differentiation, cellular senescence.

3. **Tissue Systems**: Origin, development, structure and function of primary and secondary tissues.

7. **Plant Pathology**: Diseases of rice, wheat, sugarcane, potato, mustard, groundnut and cotton crops. Factors affecting infection (host factors, pathogen factors, biotic factors like rhizosphere and phyllosphere organisms). Chemical, biological and genetic methods of diseases control (including transgenic plants).

9. **Biodiversity, Plant Genetic Resources**: Methods of conservation of plant genetic resources and its importance. Convention of Biological Diversity (CBD). Endangered, threatened and endemic taxa. Role of cell/tissue culture in propagation and enrichment of genetic diversity. Plants as sources of food, fodder, forage, fibres, oils, drugs, wood and timber, paper, rubber,
beverages, spices, essential oils and resins, gums, dyes, insecticides, pesticides and ornamentation. Biomass as sources of energy.
Botany

CHEMISTRY - Optional
of Part A – Preliminary Examination of Civil Services Exam

Section – A
(Inorganic Chemistry)

1.1 Atomic structure: Schrodinger wave equation, significance of? and? 2 quantum numbers and their significance, radial and angular probability, shapes of orbitals, relative energies of atomic orbitals as a function of atomic number. Electronic configurations of elements; Aufbau principle, Hund’s multiplicity rule, Pauli exclusion principle.

1.2 Chemical periodicity: Periodic classification of elements, salient characteristics of s,p,d and f block elements. Periodic trends of atomic radii, ionic radii, ionisation potential, electron affinity and electronegativity in the periodic table.

1.3 Chemical bonding: Types of bonding, overlap of atomic orbitals, sigma and pi bonds, hydrogen and metallic bonds. Shapes of molecules, bond order, bond length, V.S.E.P.R. theory and bond angles. The concept of hybridization and shapes of molecules and ions.

1.4 Oxidation states and oxidation number: Oxidation and reduction, oxidation numbers, common redox reactions, ionic equations. Balancing of equations for oxidation and reduction reactions.

1.5 Acids and basis: Bronsted and Lewis theories of acids and bases. Hard and soft acids and bases. HSAB principle, relative strengths of acids and bases and the effect of substituents and solvents on their strength.

1.6 Chemistry of elements:

(i) Hydrogen: Its unique position in the periodic table, isotopes, ortho and para hydrogen, industrial production, heavy water.

(ii) Chemistry of s and p block elements: electronic configuration, general characteristics properties, inert pair effect, allotropy and catenation. Special emphasis on solutions of alkali and alkaline earth metals in liquid ammonia. Preparation, properties and structures of boric acid, boron nitrides, borohydride (diborane), carboranes, oxides and oxyacids of nitrogen, phosphorous, sulphur and chlorine; interhalogen compounds, polyhalide ions, pseudohalogens, fluorocarbons and basic properties of halogens. Chemical reactivity of noble gases, preparation, structure and bonding of noble gas compounds.

(iii) Chemistry of d block elements: Transition metals including lanthanides, general characteristic properties, oxidation states, magnetic behaviour, colour. First row transition metals and general properties of their compounds (oxides, halides and sulphides); lanthanide contraction.

1.7 Extraction of metals: Principles of extraction of metals as illustrated by sodium, magnesium, aluminium, iron, nickel, copper, silver and gold.

1.8 Nuclear Chemistry: Nuclear reactions; mass defect and binding energy, nuclear fission and fusion. Nuclear reactors; radioisotopes and their applications.
Chemistry

1.9 **Coordination compounds** : Nomenclature, isomerism and theories of coordination compounds and their role in nature and medicine.

1.10 **Pollution and its control** : Air pollution, types of air pollutants; control of air and water pollution; radioactive pollution.

Section – B  
(Organic Chemistry)

2.1 **Bonding and shapes of organic molecules** : Electronegativity, electron displacements-inductive, mesomeric and hyperconjugative effects; bond polarity and bond polarizability, dipole moments of organic molecules; hydrogen bond; effects of solvent and structure on dissociation constants of acids and bases; bond formation, fission of covalent bonds: homolysis and heterolysis; reaction intermediates-carbocations, free radicals and carbenes; generation, geometry and stability; nucleophiles and electrophiles.

2.2 **Chemistry of aliphatic compounds** : Nomenclature; alkenes-synthesis, reactions (free radical halogenation) – reactivity and selectivity, sulphonation-detergents; cycloalkanes-Baeyer’s strain theory; alkenes and alkynes-synthesis, electrohilic addition reactions, Markownikov’s rule, peroxide effects, 1-3 dipolar addition; nucleophilic addition to electron-deficient alkenes; polymerisation; relative acidity; synthesis and reactions of alkyl halides, alkanols, alkanals, alkanones, alkanolic acids, esters, amides, nitriles, amines, acid anhydrides, a, β-unsaturated ketones, ethers and nitro compounds.

2.3 **Stereochemistry of carbon compounds** : Elements of symmetry, chiral and achiral compounds. Fischer projection formulae; optical isomerism of lactic and tartaric acids, enantiomerism and diastereoisomerism; configuration (relative and absolute); conformations of alkanes upto four carbons, cyclohexanes and dimethylcyclo-hexanes-their potential energy. D, L- and R, S-notations of compounds containing chiral centres; projection formulae-Fischer, Newman and sawhorse-of compounds containing two adjacent chiral centres; meso and dl-isomers, erythro and threo isomers; racemization and resolution; examples of homotopic, enantiotopic and diastereotopic atoms and groups in organic compounds, geometrical isomers; E and Z notations. Stereochemistry of SN1, SN2, E1 and E2 reactions.

2.4 **Organometallic compounds** : Preparation and synthetic uses of Grignard reagents, alkyl lithium compounds.

2.5 **Active methylene compounds** : Diethyl malonate, ethyl accetoacetate, ethyl cyanoacetate-applications in organic synthesis; tautomerism (keto-enol).

2.6 **Chemistry of aromatic compounds** : Aromaticity; huckel’s rule; electrophilic aromatic substitution-nitration, sulphonation, halogenation (nuclear and side chain), Friedel-Crafts alkylation and acylation, substituents effect; chemistry and reactivity of aromatic halides, phenols, nitro-, diazo, diazonium and sulphonic acid derivatives, benzyne reactions.

2.7 **Chemistry of biomolecules** : (i) **Carbohydrates** : Classification, reactions, structure of glucose, D, L-configuration, osazone formation, fructose and sucrose; step-up step-down of aldoses and ketoses, and their interconversions, (ii) **Amino acids** : Essential amino acids;
2.8 Basic principles and applications of UV, visible, IR and NMR spectroscopy of simple organic molecules.

Section – C
(Physical Chemistry)

3.1 Gaseous State: Deviation of real gases from the equation of state for an ideal gas van der Waals and Virial equation of state, critical phenomena, principle of corresponding states, equation for reduced state. Liquification of gases, distribution of molecular speed, collisions between molecules in a gas; mean free path, specific heat of gases.

3.2 Thermodynamics: (i) First law and its applications: Thermodynamic systems, states and processes, work, heat and internal energy, zeroth law of thermodynamics, various types of work done on a system in reversible and irreversible processes. Calorimetry and thermochemistry, enthalpy and enthalpy changes in various physical and chemical processes. Joule-Thomson effect, inversion temperature. Heat capacities and temperature dependence of enthalpy and energy changes.

(ii) Second law and its applications: Spontaneity of a process, entropy and entropy changes in various processes, free energy functions, criteria for equilibrium, relation between equilibrium constant and thermodynamic quantities.

3.3 Phase rule and its applications: Equilibrium between liquid, solid and vapours of a pure substance, Clausius-Clapeyron equation and its applications. Number of components, phases and degrees of freedom; phase rule and its applications; simple systems with one (water and sulphur) and two components (lead silver, salt hydrates). Distribution law, its modifications, limitations and applications.

3.4 Solutions: Solubility and its temperature dependence, partially miscible liquids, upper and lower critical solution temperatures, vapour pressures of liquids over their mixtures, Raoult’s and Henry’s laws, fractional and steam distillations.

3.5 Colligative Properties: Dilute solutions and colligative properties, determination of molecular weights using colligative properties.

3.6 Electrochemistry: Ions in solutions, ionic equilibria, dissociation constants of acids and bases, hydrolysis, pH and buffers, theory of indicators and acid-base titrations. Conductivity of ionic solutions, its variation with concentration. Ostwald’s dilution law, Kohlrausch law and its application. Transport number and its determination. Faraday’s laws of electrolysis, galvanic cells and measurements of their e.m.f., cell reactions, standard cell, standard reduction potential, Nernst equation, relation between thermodynamic quantities and cell e.m.f., fuel cells, potentiometric titrations.

3.7 Chemical kinetics: Rate of chemical reaction and its dependence on concentrations of the reactants, rate constant and order of reaction and their experimental determination; differential and integral rate equations for first and second order reaction, half-life periods; temperature
dependence of rate constant and Arrhenius parameters; elementary ideas regarding collision and transition state theory.

Chemistry

3.8 Photochemistry: Absorption of light, laws of photochemistry, quantum yield, the excited state and its decay by radiative, nonradiative and chemical pathways; simple photochemical reactions.

3.9 Catalysis: Homogeneous and heterogeneous catalysis and their characteristics, mechanism of heterogeneous catalysis; enzyme catalysed reactions (Michaelis-Menten mechanism).

3.10 Colloids: The colloidal state, preparation and purification of colloids and their characteristics properties; lyophilic and lyophobic colloids and coagulation; protection of colloids; gels, emulsions, surfactants and micelles.
Civil Engineering - Optional
of Part A – Preliminary Examination of Civil Services Exam

Part – A

1. **Engineering Mechanics**: Units and Dimensions, SI Units, Vectors, Concept of Force, Concept of particle and rigid body. Concurrent, nonconcurrent and parallel forces in a plane, moment of force and Varignon’s theorem, free body diagram, conditions of equilibrium, Principle of virtual work, equivalent force system.

First and Second Moments of area, Mass moment of Inertia.

Static Friction Inclined plane and bearings.

Kinematics and Kinetics: Kinematics in cartesian and polar co-ordinates, motion under uniform and nonuniform acceleration, motion under gravity. Kinetics of particle: Momentum and Energy principles, D Alembert’s Principle, Collision of elastic bodies, rotation of rigid bodies, simple harmonic motion.

2. **Strength of Materials**: Simple Stress and Strain, Elastic constants, axially loaded compression members, Shear force and bending moment, theory of simple bending, Shear Stress distribution across cross sections, Beams of uniform strength, Leaf spring, Strain Energy in direct stress, bending and shear.

**Deflection of beams**: Macaulay’s method, Mohr’s moment area method, Conjugate beam method, unit load method, Torsion of Shafts, Transmission of power, closedcoiled helical springs, Elastic stability of columns: Euler’s, Rankine’s and Secant formulae. Principal Stresses and Strains in two dimensions, Mohr’s Circle. Theories of Elastic Failure, Thin and Thick cylinders: Stresses due to internal and external pressures-Lame’s equation.

Part – B

**Geotechnical Engineering**: Types of soil, field identification and classification, phase relationships, consistency limits, particle size distribution, classification of soil, structure and clay mineralogy.

Capillary water and structural water, effective stress and pore water pressure, Darcy’s Law, factors affecting permeability, determination of permeability, permeability of stratified soil deposits.
Seepage pressure, quick sand condition, compressibility and consolidation, Terzaghi’s theory of one dimensional consolidation, consolidation test. Compaction of soil, optimum moisture content, Proctor Density.

Civil Engineering

Subsurface exploration, methods of boring, sampling, types of sampler, field tests.

Shear strength of soils, Mohr-Coulomb failure theory, shear tests Earth pressure at rest, active and passive pressures, Rankine’s theory, Coulomb’s wedge theory, earth pressure on retaining wall.

Bearing capacity, Terzaghi and other important theories, net and gross bearing pressure, Immediate and consolidation settlement.

Load carrying capacity of pile groups.

Transportation Engineering : Highway alignment, choice of layout and capacity of highways, location survey, geometric design of highways-various elements, curves, grade separation and segregation of traffic, intersection design, highway materials and testing subgrade and pavement components, types of pavements, road drainage, elements of airport engineering.

Railway engineering-elements of permanent track-rails, sleepers, ballast and rail fastenings, tractive resistance, elements of geometric design-gradients and grade compensation on curves, cant transition curves and vertical curves, stresses in railway tracks, points and crossings, signalling and interlocking, maintenance of railway track, Culverts and small bridges.

Part – C

Fluid Mechanics : Fluid properties, fluid statics, forces on plane and curved surfaces, stability of floating and submerged bodies.

Kinematics : Velocity, streamlines, continuity equation, accelerations irrotational and rotational flow, velocity potential and stream functions, flownet, separation.

Dynamics : Euler’s equation along streamline, control volume equation, continuity, momentum, energy and moment of momentum equation from control volume equation, applications to pipe flow, moving vanes, moment of momentum, Dimensional analysis.

Boundary layer on a flat plate, drag and lift on bodies. Laminar and Turbulent Flows Laminar and turbulent flow through pipes, friction factor variation, pipe networks, water hammer, and surge tanks.

Open Channel Flow : Energy and momentum correction factors, uniform and non-uniform flows, specific energy and specific force, critical depth, Friction factors and roughness coefficients, flow in transitions, free overfall, weirs, hydraulic jump, surges, gradually varied flow equations, surface profiles, moving hydraulic jump.
Environmental Engineering

**Water Supply**: Estimation of surface and subsurface water resources, predicting demand for water, impurities of water and their significance, physical, chemical and bacteriological analysis, water borne diseases, standards for potable water.

**Intake of water**: Pumping and gravity schemes, water treatment: principles of coagulation, flocculation and sedimentation; slow-, rapid-, pressure-, filters; chlorination, softening, removal of taste, odour and salinity.

**Water storage and distribution**: Storage and balancing reservoir types, location and capacity. Distribution systems: layout, hydraulics of pipe lines, pipe fittings, valves including check and pressure reducing valves, meters, analysis of distribution systems, leak detection, maintenance of distribution systems, pumping stations and their operations.

**Sewerage systems**: Domestic and industrial wastes, storm sewage-separate and combined systems, flow through sewers, design of sewers, sewer appurtenances, manholes, inlets, junctions, siphon. Plumbing in Public buildings.

**Sewage characterisation**: BOD, COD, solids, dissolved oxygen, nitrogen and TOC. Standards of disposal in normal water course and on land.

**Sewage treatment**: Working principles, units, chambers, sedimentation tank, trickling filters, oxidation ponds, activated sludge process, septic tank, disposal of sludge, recycling of waste water.

Elements of Engineering Economics, methods of appraisal, present worth, annual cost, benefit-cost, incremental analysis. Economy of scale and size. Choosing between alternatives including levels of investments. Project profitability.
Accounting and Auditing:

Accounting

Generally Accepted Principles of Accounting – The Accounting Equation- Accrual Concept- Other concepts and conventions, Distinction between capital and revenue expenditure. Accounting Standards and their application- Accounting standards relating to fixed assets, depreciation, inventory, recognition of revenue.

Final Accounts of non profit organisation.

Auditing

- Nature, objectives and basic principles of auditing.
- Techniques of Auditing- physical verification, examination of documents and vouching, direct confirmation, analytical review.
- Planning an audit, audit programmes, working papers, audit process.
- Evaluation of internal controls.
- Test checking and sampling.
- Broad outlines of company audit.
- Audit of non-corporate enterprises.
- Internal and management audit.
Commerce

Part – II

Business Organisation:
Distinct features of different forms of business organisation.

Sole Proprietor
Partnerships-characteristics, Registration, Partnership deed, Rights and duties, Retirement, Dissolution,
Joint Stock Company-Concept, characteristics, types.
Cooperative and State ownership forms of organisations.
Types of securities and methods of their issue.
Economic functions of the capital market, stock exchanges, Mutual Funds. Control and regulation of capital market.
Foreign Trade-Procedure and financing of import and export trade. Incentives for export promotion. Financing of foreign trade.
Insurance-Principles and practice of Life, Fire, Marine and General Insurance.

Management
Management functions – Planning-strategies, Organising-levels of authority Staffing, Line function and staff function, Leadership, Communication, Motivation, Directing-Principles, Strategies.
Coordination-Concept, types, methods.
Control-principles, performance standards, corrective action. Salary and wage administration-Job evaluation.
Organisation Structure – Centralization and decentralisation-Delegation of authority-span of control-Management by objectives and Management by Exception.
Management of change; Crisis Management.
Office Management-scope and principles; systems and routines; handling of records-modern aids to Office management; office equipment and machines; Automation and Personal computers.
Impact of Organisation and Methods (O & M).
Commerce

**Company Law**

Joint stock companies-incorporation; documents and formalities-Doctrine of indoor management and constructive notice.

Duties and powers of the board of directors of a company.

Accounts and Audit of Companies.

Company Secretary-role and functions-qualifications for appointment.

Economics
General Economics

1) Micro-economics: (a) Production: Agents of Production; Costs and Supply; Isoquants (b) Consumption and Demand; Elasticity concept (c) Market Structure and concepts of equilibrium; (d) Determination of prices; (e) Components and Theories of Distribution (f) Elementary concepts of Welfare economics: Pareto-optimality-Private and social products-consumers surplus.

2) Macro-economics: (a) National Income concepts; (b) Determinants of National Income Employment (c) Determinants of consumption, savings and Investment (d) Rate of Interest and its determination (e) Interest and profit.

3) Money, Banking and Public Finance: (a) Concepts of Money and measures of money supply; velocity of money (b) Banks and credit creation; Banks and portfolio management (c) Central Bank and control over money supply (d) Determination of the price level. (e) Inflation, its causes and remedies (f) Public, Finance-Budgets-Taxes and non-tax revenues-Types of Budget deficits.

4) International Economics: (a) Theories of International Trade-comparative costs-Heckscher-Ohlin-Gains from Trade-Terms of Trade.

(b) Free Trade and Protection.

(c) Balance of Payments accounts and Adjustment.

(d) Exchange rate under free exchange markets.

(e) Evolution of the International Monetary System and World Trading order-Gold Standard-the Brettonwoods system.

IMF and the World Bank and their associates.

Floating rates-GATT and WTO

5) Growth and Development: (a) Meaning and measurement of growth; Growth, distribution and Welfare; (b) Characteristics of underdevelopment; (c) Stages of Development; (d) Sources of growth-capital, Human capital, population, productivity, Trade and aid, non-economic factors; growth Strategies, (e) Planning in a mixed economy-Indicative planning-Planning and growth.

6) Economic Statistics: Types of averages-measures of dispersion-correlation-Index numbers; types, uses and limitations.
Indian Economics

1. Main features; Geographic size-Endowment of natural resources, Population; size, composition quality and growth trend-Occupational distribution-Effects of British Rule with reference to Drain theory and Laissez Faire policy.

3. Growth in income and employment since Independence-Rate, Pattern, Sectoral trends-Distributional changes-Regional disparities.

5. Broad Fiscal, monetary, industrial trade and agricultural policies-objectives, rationale, constraints and effects.
Electrical Engineering - Optional
of Part A – Preliminary Examination of Civil Services Exam

Electrical Circuits - Theory and Applications

Circuit components, network graphs, KCL, KVL; circuit analysis methods: nodal analysis, mesh analysis; basis network theorems and applications; transient analysis: RL, RC and RLC circuits; sinusoidal steady state analysis; resonant circuits and applications; coupled circuits and applications; balanced 3-phase circuits. Two port networks, driving point and transfer functions; poles and zeros of network functions.

Signals & Systems

Representation of continuous-time and discrete-time signals and systems; LTI systems; convolution; impulse response; time-domain analysis of LTI systems based on convolution and differential/difference equations. Fourier transform, Laplace transform, Z-transform, Transfer function. Sampling and recovery of signals.

Control Systems

Elements of control systems; block-diagram representations; open-loop and closed-loop systems; principles and applications of feed back. LTI systems: time domain and transform domain analysis. Stability: Routh Hurwitz criterion, root-loci, Nyquist’s criterion. Bode-plots, Design of lead-lag compensators; Proportional, PI, PID controllers.

E.M. Theory

Electro-static and magneto-static fields; Maxwell’s equations; e.m. waves and wave equations; wave propagation and antennas; transmission lines; micro-wave resonators, cavities and wave guides.

Electrical Engineering Materials

Analog Electronics

Digital Electronics
Boolean algebra, minimisation of Boolean function; logic gates, digital IC families (DTL, TTL, ECL, MOS, CMOS). Combinational circuits: arithmetic circuits, code converters, multiplexers and decoder’s. Sequential circuits: latches and flip-flops, counters and shift registers. Comparators, timers, multivibrators. Sample and hold circuits, ADCs and DACs. Semiconductor memories.

Communication Systems

Computers and Microprocessors

Computer organization: number representation and arithmetic, functional organisation, machine instructions, addressing modes, ALU, hardwired and microprogrammed control, memory organisation. Elements of microprocessors: 8-bit microprocessors – architecture, instruction set, assembly level programming, memory, I/O interfacing, microcontrollers and applications.

Measurement and Instrumentation

Error analysis; measurement of current voltage, power, energy, power-factor, resistance, inductance, capacitance and frequency; bridge measurements. Electronic measuring instruments: multimeter, CRO, digital voltmeter, frequency counter, Q-meter, spectrum-analyser, distortion-meter. Transducers: thermocouple, thermistor, LVDT, strain-gauges, piezoelectric crystal. Use of transducers in measurement of non-electrical quantities. Data-acquisition systems.

Energy Conversion

Power Systems

Electric power generation: thermal, hydro, nuclear. Transmission line parameters: steady-state performance of overhead transmission lines and cable. Distribution systems: insulators, bundle conductors, corona and radio interference effects; per-unit quantities; bus admittance and impedance
matrices; load flow; voltage control and power factor correction. Economics operation. Principles of over current, differential and distance protection; solid state relays, circuit breakers, concept of system stability. HVDC transmission.

**Power Electronic and Electric Drives**

Semiconductor power devices: diode, transistor, thyristor, triac, GTO and MOSFET, state characteristics, principles of operation; triggering circuits; phase controlled rectifiers; bridge converters-fully controlled and half controlled; principles of thyristor chopper and inverter. Basic concept of speed control of DC and AC monitor drives.

**Elements of IC Fabrication Technology**

Overview of IC Technology. Unit steps in IC fabrication: water cleaning, photo-lithography, wet and dry etching, oxidation, diffusion, ion-implantation, CVD and LPCVD techniques for deposition of poly-silicon, silicon, silicon-pnitrde and silicon dioxide; metallisation and passivation.
<p>| 2. | Sociology of Education | - Education as an instrument of social change &amp; modernization, culture and education, Group dynamics, Organisational behaviour &amp; its control. |
| 3. | Psychology of Education | - Social, emotional and intellectual development, Heredity and environment, Factors affecting learning, Transfer of learning, Learning and motivation, Pavlov’s &amp; Skinner’s theories of Learning, Carl Rogers’ and Eysenck’s theories of personality, Information Processing Theory &amp; Memory processing, Emotional intelligence, Relationship between intelligence &amp; Creativity. Developing Creativity through Brainstorming. |
| 5. | Economics of Education | - Education and economic development, Planning and financing of education. |</p>

Geography

Geography – Optional
of Part-A Preliminary Examination of Civil Services Exam

Section-A

Physical Geography

i. Geomorphology

Origin of the earth; Geological Time scale; Interior of the earth; Types and characteristics of rocks; Folding and Faulting; Volcanoes; Earthquakes; Weathering; Landforms caused by fluvial, aeolian and glacial actions.

ii. Climatology

Structure and composition of atmosphere; Temperature; Pressure belts and Wind systems; Clouds and rainfall types; Cyclones and anti-cyclones; Major climatic types.

iii. Oceanography

Ocean relief; Temperature; Salinity; Ocean deposits; Ocean currents, El Nino and La Nino; Waves and tides.

iv. Biogeography

Origin and types of soils; Major biomes of the world; Ecosystem and food chain; Environmental and degradation and conservation.

Section-B

Human Geography

i. Man and Environment Relationship

Growth and development of Human Geography; Concepts of Determinism and Possibilism.

ii. Population

Races of mankind and tribes; growth and distribution of world population; migration; population problems of developed and developing countries.

iii. Economic Activities

Food gathering and hunting; pastoral herding; fishing and forestry; Types of agriculture-shifting, subsistence, commercial and plantation; Mining, Power; Manufacturing- locational factors of textile, iron and steel, sugar and fertilizer industries; Tertiary activities-trade, transport, communication and services.

iv. Settlements : Origin; types and patterns of rural settlements; Processes of urbanisation; morphology and functional classification of towns; million – cites and mega – cities.
Geography

Section-C
Geography of the World
i) Major Natural Regions: Characteristics, economic base and human adaptation.
ii) Regional Geography of Developed Countries: Canada, U.S.A, Western Europe, Russia, Japan, Australia and New Zealand.
iii) Regional Geography of Developing Countries: S.E. Asia, S.W. Asia, China, Southern Africa and Brazil.
iv) Regional Geography of South Asia.

Section-D
Geography of India
i) Physical Setting
Landforms, drainage, climate, soils and natural vegetation.

ii) Economic Base
Minerals & energy resources, aquatic resources, forest resources; irrigation, agriculture and industries; trade and commerce.

iii) Population
Growth, distribution and density; demographic characteristics.

iv) Environmental problems, developmental issues and regional planning.

Section-E
Geographical Thought
i) Ancient Period: Contributions of Indians, Greeks, Romans and Arabs.

ii) Pre-Modern Period: Contribution of Verenius, Kant, Humboldt, and Ritter

iii) Modern Period: Dichotomy of determinism and possibilism; contributions of Ratzel, Semple, Huntington and La Blache.

iv) Recent Period: Quantitative Revolution; Radicalism, Behaviouralism and Humanism.

Section-F
Techniques of Geographical Analysis
i) Maps: Scale and types, uses.

ii) Diagrams: Types and uses.
iii) **Projections**: Types, characteristics and uses.

iv) **Remote sensing and geographical information system (GIS)**: Aerial photographs and imagery, GIS.
Part-I

(a) **General Geology**: Solar System. The Earth: its origin, age and internal constitution. Volcanoes- types, distribution geological effects and products. Earthquakes- intensity, magnitude, distribution, causes and effects. Elementary ideas about isostasy, geosynclines, mountain building, continental drift, sea floor spreading and plate tectonics.

Topographic maps and their interpretation. Use of clinometer compass in the field. Measurements of bed, foliation, folds joints, faults and lineations in the field. Principles of geological mapping. Effects of topography on outcrops. Drawing of sections.

Part-II

(a) **Crystallography**: Elements of crystal structure. Laws of crystallography, Symmetry elements of normal classes of seven crystal systems

(b) **Mineralogy**: Physical, chemical and optical properties of the following common rock forming minerals: quartz, feldspar, mica, pyroxene, amphibole, olivine, garnet, chlorite, carbonates, aluminosilicates. Structures of silicates and crystal chemistry of minerals. Gemstones.

(c) **Economic Geology**: Ore, ore mineral and gangue. Classification of ore deposits. Important processes of their information. Occurrence, origin and distribution in India of the ores of aluminium, chromium, copper, gold, lead, zinc, iron, manganese and radioactive elements. Deposits of minerals use as abrasives, refractories and in ceramics, deposits of coal and petroleum. Elements of prospecting for mineral deposits.

Part-III

(a) **Igneous Petrology**: Origin of magma and formation of igneous rocks. Bowen’s reaction
Geology

principle. Crystallisation of binary systems. Classification of igneous rocks. Textures and structures of igneous rocks. Composition, origin and mode of occurrence of granite, syenite, diorite, mafic and ultramafic groups, anorthosites and alkaline rocks.

(b) **Sedimentary Petrology**: Sedimentary process and products. Classification of sedimentary rocks. Sedimentary structures. Residual deposits- their mode of formation, characteristics and types, Clastic deposits – their classification, mineral composition and texture. Elementary ideas about the origin and characteristics of quartz arenites, arkoses and graywackes. Siliceous and calcareous deposits of chemical and organic origin.

(c) **Metamorphic Petrology**: Types and factors of metamorphism. Zones, grades and facies of metamorphism. Regional and contact metamorphism. Textures and structures of metamorphic rocks. Metamorphism of argillaceous, arenaceous, calcareous and basic rocks. Metasomatism.

**Part-IV**

(a) **Palontology**: Habits and habitats of animals. Fossils and fossilization. Modes of preservation. Application of fossils, Study of morphology and geological history of Foraminiferida, Brachipoda, Bivalvia, Gastropoda, Cephalopoda, Trilobita, Echinoidea and Anthozoa.

(b) **Stratigraphy and Geology of India**: Fundamental laws of stratigraphy. Stratigraphic classification lithostratigraphic, biostratigraphic and chronostratigraphic. Geological time scale.

Physiographic divisions and outline of stratigraphy of India. Brief study of Dharwar, Vindhyan and Gondwana Supergroups and Siwalik Group with reference to their major subdivisions, lithology, fossils, areal distribution and economic importance.
Indian History

Indian History - Optional
of part A- Preliminary Examination of Civil Services Exam

Section-A

1. Prehistoric cultures in India
3. Geographical distribution and characteristics of pastoral and farming communities outside the Indus region, from the neolithic to early iron phases.
4. Vedic society. The Vedic texts; change from Rig vedic to later Vedic phases. Religion; Upanishadic thought. Political and social organisation; evolution of monarchy and varna system.
5. State formation and urbanization, from the mahajanapadas to the Nandas. Jainism and Buddhism. Factors for the spread of Buddhism.
6. The Mauryan Empire. Chandragupta; Megasthenes. Asoka and his inscriptions; his dhamma, administration, culture and art. The Arthasastra.

Section-B

13. The fifteenth and early 16th Century: major Provincial dynasties; Vijaya-nagara
Indian History

Empire. The Lodis, First phase of the Mughal Empire: Babur, Humayun. The Sur empire and administration. The Portuguese.
Economy: conditions of peasants and artisans, growth in trade; commerce with Europe. Social stratification and status of women.

Section- C

18. Economic Impact of the British Raj: Drain of Wealth (Tribute); land revenue settlements (zamindari, ryotwari, mahalwari); Deindustrialisation; Railways and commercialisation of agriculture; Growth of landless labour.
20. Resistance to British rule: Early uprisings; The 1857 Revolt- causes, nature, course and consequences.
22. Gandhi and his thought; Gandhian techniques of mass mobilisation- Khilafat and Non Cooperation Movement, Civil Disobedience and Quit India Movement; Other strands in the National Movement- Revolutionaries, the Left, Subhas Chandra Bose and the Indian National Army.
23. Separatist Trends in Indian nationalist politics- the Muslim League and the Hindu
Indian History

Mahasabha; The post-1945 developments; Partition and Independence.

I Jurisprudence
2. Schools of Jurisprudence: Analytical, Historical, Philosophical, Sociological and Natural.
3. Administration of Justice: Theories of punishment.
5. A few basic Legal concepts:
   (i) Rights and Duties.
   (ii) Legal Personality.
   (iii) Ownership and Possession.

II Constitutional Law of India
2. Preamble.
4. Constitutional position and powers of President and Governors.
5. Supreme Court and High Courts: Jurisdiction, powers, appointment and transfer of Judges.
7. Distribution of Legislative and Administrative Powers between the Union and the States.

III International Law:
1. Nature and definition of International Law.
2. Sources: Treaty, Custom, General Principles of Law recognised by civilised nations and subsidiary means of determination of law.
Law

4. The United Nations, its objective, purpose and principal organs, Constitution, role and jurisdiction of International Court of Justice.

5. Protection of Human Rights:
   (i) Provisions in the UN Charter.

IV Torts:
1. Nature and Definition of Tort.
2. Liability based on fault and strict liability.
3. Vicarious Liability including State Liability.
4. Joint Tort feasors.
5. Negligence.
6. Defamation.
7. Conspiracy.
8. Nuisance.
10. Malicious Prosecution.

V Criminal Law:
1. General Principles of criminal liability: Mens rea actus reus.
2. Preparation and criminal attempts.
3. General Exceptions.
5. Abetment.
Law

8. Murder and culpable homicide.
9. Theft, extortion, robbery and dacoity.
10. Misappropriation and Criminal Breach of Trust.

VI Law of Contract:
1. Definition of contract:
2. Basic elements of contract: Offer, acceptance, consideration, contractual capacity.
3. Factors vitiating consent.
4. Void, voidable, illegal and unenforceable agreements.
5. Wagering agreements.
6. Contingent contracts.
7. Performance of contracts.
8. Dissolution of contractual obligations: frustration contracts.
Mathematics – Optional
of Part A – Examination of civil Services Exam

1. **Algebra** : Elements of Set Theory; Algebra of Real and Complex numbers including Demovire’s theorem; Polynomials and Polynomial equations, relation between Coefficients and Roots, symmetric functions of roots; Elements of Group Theory; Sub-Group, Cyclic Groups, Permutation, Groups and their elementary properties.
Rings, Integral Domains and Fields and their elementary properties.

Matrices : Addition, Multiplication, Determinants of a Matrix, Properties of Determinants of order, Inverse of a Matrix, Cramers rule.

3. **Geometry and Vectors** : Analytic Geometry of straight lines and conics in Cartesian and Polar coordinates; Three Dimensional geometry for planes, straight lines, sphere, cone and cylinder. Addition, Subtraction and Products of Vectors and Simple applications of Geometry.

6. **Mechanics** : Concepts of particles-Lamina; Rigid Body; Displacements; force; Mass; Weight; Motion; Velocity; Speed; Acceleration; Parallelogram of forces; Parallelogram of velocity; acceleration; resultant; equilibrium of coplanar forces; Moments; Couples; Friction; Centre of Mass, Gravity; Laws of motion; Motion of a particle in a straight line; simple Harmonic Motion; Motion under conservative forces; Motion under gravity; Projectile; Escape velocity; Motion of artificial satellites.

Mechanical Engineering

Mechanical Engineering – Optional
of Part A – Preliminary Examination of Civil Services Exam

Statics:
Simple applications of equilibrium equations.

Dynamics:
Simple applications of equations of motion, work, energy and power.

Theory of Machines:
Simple examples of kinematic chains and their inversions.
Different types of gears, bearings, governors, flywheels and their functions.
Static and dynamic balancing of rigid rotors.
Simple vibration analysis of bars and shafts.
Linear automatic control systems.

Mechanics of Solids:
Stress, strains and Hookes Law, Shear and bending moments in beams. Simple bending and torsion of beams, springs and thin walled cylinders. Elementary concepts of elastic stability, mechanical properties and material testing.

Manufacturing Science:

Manufacturing Management:
Methods and time study, motion economy and work space design, operation and flow process charts. Cost estimation, break-even and analysis. Location and layout of plants, material handling. Capital budgeting, job shop and mass production, scheduling, dispatching, Routing, Inventory.

Thermodynamics:
Mechanical Engineering

and Vapour compression cycle analysis, open and closed cycle gas turbine with intercooling, reheating.

**Energy Conversion :**

Flow of steam through nozzles, critical pressure ratio, shock formation and its effect. Steam Generator: mountings and accessories. Impulse and reaction turbines, elements and layout of thermal power plants

Hydraulic turbines and pumps, specific speed, layout of hydraulic power plants.

Introduction to nuclear reactors and power plants, handling of nuclear waste.

**Refrigeration and Air Conditioning :**

Refrigeration equipment and operation and maintenance, refrigerants, principles of air conditioning, psychrometric chart, comfort zones, humidification and dehumidification.

**Fluid Mechanics :**

Hydrostatics, continuity equation, Bernoulli’s theorem. Flow through pipes, discharge measurement laminar and turbulent flow, boundary layer concept.
Medical Science – Optional
of Part A – Preliminary Examination of Civil Services Exam

**Human Anatomy**

General principles and basic structural concept of gross anatomy of hip joint, heart, stomach, lungs, spleen, kidneys, uterus, ovary and adrenal glands.

Histological features of parotid gland, bronchi, testis, skin, bone and thyroid gland.

Gross anatomy of thalamus, internal capsule, cerebrum, including their blood supply; functional localisation in cerebral cortex, cerebellum, spinal cord, eye, ear, throat, cranial nerves.

Embryology of vertebral column, respiratory system and their congenital anomalies.

**Human physiology and biochemistry :**

Neurophysiology: Sensory receptors, re-ticular formation, cerebellum and basal ganglia.

Reproduction: Regulation of functions of male and female gonads.

Cardiovascular system: Mechanical and electrical properties of heart including ECG : regulation of cardiovascular functions.

GI system: bilirubin metabolism, liver function tests,

Haematology: haemoglobin synthesis, abnormal haemoglobins.

Respiration: regulation of respiration, digestion and absorption of fats, metabolism of carbohydrates.

Renal Physiology: tubular function, regulation of pH.

Nucleic acids: RNA, DNA, genetic code and protein synthesis.

**Pathology and Microbiology :** Principles of inflammation, principles of carcinogenesis and tumour spread, coronary heart disease, infective diseases of liver and gall bladder, pathogenesis of tuberculosis.

Immune system, immunological and scrological tests for collagen vascular disease. Histological diagnosis by fluroscnet microscopy.

Life cycle and laboratory diagnosis of Entamoeba histolytica, malarial parasitic, ascaros

**Medicine :**

Protein energy malnutrition.
Medical Science

Medical management of: Coma, cerebro-vascular accidents, status asthmaticus, cardio pulmonary arrest, status epilepticus, acute renal failure.

Clinical features, etiology and treatment of: Coronary heart disease, rheumatic heart disease, pneumonia, cirrhosis of liver, amoebic liver abscess, peptic ulcer, pycolone-phiritis, leprosy, rheumatoid arthritis, diabetes mellitus, poliomyelitis, meningitis, schizophrenia.

**Surgery:**

Principles of surgical management of severely injured and process of fracture healing. Malignant tumours of stomach and their surgical management. Signs, symptoms, investigation and management of fractures of femur, principles of pre-operative and post-operative care.

Clinical manifestations, investigations and management of: Hydrocephalus, Buerger’s disease, appendicitis, benign prostatic hypertrophy, spinabifida, brochogenic carcinoma, carcinoma breast, carcinoma colon.

Clinical manifestations, investigations and surgical management of: Intestinal obstruction, acute urinary retention, spinal injury, haemorrhagic shock, pneumothorax, pericardial tamponade, haematemesis.

**Preventive and Social Medicine:**

Principles of epidemiology, health care delivery.

Concept and general principles of prevention of disease and promotion of health. National health programmes, effects of environmental pollution on health, concept of balanced diet, family planning methods.
Philosophy – Optional
of Part A – Preliminary Examination of Civil Services Exam

Section – ‘A’
Problems of Philosophy

1. Substance and Attributes : Aristotle, Descartes, Locke, Berkeley’s criticism, Nyaya-Vaisesika, Buddhist criticism of Pudgala.

2. God, Soul and the World : Thomas Aquinas, St. Augustine, Spinoza, Descartes, Nyaya-Vaisesika, Sankara, Ramanuja.

3. Universals : Realism and Nominalism (Plato, Aristotle, Berkeley’s criticism of abstract ideas, Nyaya-Vaisesika, Buddhism).

5. Truth and Error : Correspondence Theory, Coherence theory, Pragmatic Theory; Khyativada (Anyathakhyati, Akhyati, Anivacaniyakhyati).

6. Matter and Mind : Descartes, Spinoza, Leibnitz, Berkeley

Section – B
Logic

1. Truth and Validity

2. Classification of sentences : Traditional and Modern.

3. Syllogism : Figures and Moods; Rules of Syllogism (General and special) validation by Venn Diagrams; Formal Fallacies.

4. Sentential Calculus : Symbolisation; Truth-Functions and their interdefinability; Truth Tables; Formal Proof.

Section – C
Ethics

1. Statement of fact and statement of value.

2. Right and Good; Teleology of Deontology.

3. Psychological Hedonism.
Philosophy

4. Utilitarianism (Bentham; J.S. Mill).

5. Kantian Ethics.

6. Problem of the freedom of will.

9. Jaina Ethics

10. Four Noble Truths and Eight fold path in Buddhism.

Physics

Physics – Optional
of Part A – Preliminary Examination of Civil Services Exam

1. Mechanics and Waves

Dimensional analysis. Newton’s laws of motion and applications, variable mass systems, projectile
Rotational dynamics-kinetic energy, angular momentum, theorems of moment of inertia a calculations in
simple cases. Conservative forces, frictional forces. Gravitational potential and intensity due to spherical
objects. Central forces, Kepler’s problem, escape velocity and artificial satellite (including GPS).
Streamline motion, viscosity, Poiseuille’s equation. Applications of Bernoul equation and Stoke’s law.

Special relativity and Lorentz transformation-length contraction, time dilation, mass-energy relation.

Simple harmonic motion, Lissajous figures. Damped oscillation, forced oscillation and resonance. Bea
Phase and group velocities. Stationary waves, vibration of strings and air columns, longitudinal waves
solids. Doppler effect. Ultrasonics and applications.

2. Geometrical and Physical Optics.

Laws of reflection and refraction from Fermat’s principle. Matrix method in paraxial optics- thin lenses
formula, nodal planes., system of two thin lenses. Chromatic and spherical aberrations. Simple optical
instruments-magnifier, eyepieces, telescopes and microscopes.

Huygen’s principle- reflection and refraction of waves. Interference of light-young’s experiment. Newton’s
rings, interference by thin films, Michelson interferometer. Fraunhofer diffraction-single slit double slit,
diffraction grating, resolving power. Fresnel diffraction-half-period zones and zone pla. Production and
detection of linearly, circularly and elliptically polarised light. Double refraction quarter-waves plates and

Elements of fibre optics- attenuation; pulse dispersion in step index and parabolic index fibres; mater
and applications.

3. Heat and Thermodynamics

Thermal equilibrium and temperature. The zeroth law of thermodynamics. Heat and the first law thermo
dynamics. Efficiency of Carnot engines. Entropy and the second law of thermodynamics. Kinetic theory
and the equation of state of an ideal gas. Mean free path, distribution of molecular speeds and energies.
Trasport phenomena. Andrew’s experiment-van der Waals equation and application of Joule-Kelvin effect
Kirchhoff’s laws. Black-body radiation-Stefan-Boltzman law, spectral radiancy, Will displacement law,
application to the cosmic microwave background radiation, Planck radiation law.
4. Electricity and Magnetism

5. Atomic and Nuclear Physics

6. Electronics

Diodes in half-waves and full-wave rectification, qualitative ideas of semiconductors, p type and n type semiconductors, junction diode, Zener diode, transistors, binary numbers, Logic gates and truth tables, Elements of microprocessors and computers.
Political Science

Political Science-Optional
Of Part A-Preliminary Examination of Civil Services Exam

Section-A

1. Political Science: Nature & scope of the discipline, relationship with allied disciplines like History, Economics, Philosophy, Sociology, Psychology.
2. Meaning of Politics: Approaches to the study of Politics.
10. Theories of Development: Meaning and various Approaches. Concept and Theories of underdevelopment Debates in the Third World.
12. Nationalism and Internationalism:
13. Major theories of International relations: Realist Marxist, Systems & Decision making & Game theory.

Section-B

Indian Government and politics

1. Approaches to the study of Governments: Comparative historical, legal institutional, political economy and political sociology, approaches.
2. Classification of Political systems: Democratic and Authoritarian, characteristics of Political systems in the third world.
3. Typologies of constitutions; Basic features of these constitutions & governments: including U.K., USA, France, Germany, China and South Africa.
6. Nature of Indian federalism: Centre- state relations, legislative, administrative, financial and political; politics of regional move and National Integration.
7. Fundamental Rights: Constitutional provisions and political dynamics. Judicial Interpretations and socio political realities; Fundamental Duties.
8. The Union Executive: President, Prime Minister and the Council of Ministers, Constitutional provisions & framework and political trends.
9. **Parliament:** Powers and functions of the Lok Sabha & Rajya Sabha; Parliamentary Committees; Functioning of the Parliamentary system in India.

10. **The Judiciary:** The Supreme Court, Judicial Review, Judicial Activism, Public Interest Litigation; Judicial Reforms.

11. **The State Executive:** Governor, Chief Minister and the Council of Ministers; Constitutional Provisions and Political trends.

12. **Indian Party System:** Evolution and Contemporary trends; coalition government at the Centre and States, pressure groups in Indian politics.

13. **The interaction of Government & Scientific & Technology business:** Previous and now their inter relationship and changing roles in Society, Elites, Role of Pressure groups class and voluntary associations in society.

15. **Bureaucracy and Development:** Post-colonial India; its changing role in the context of liberalis after, bureaucratic Accountability.

16. **Challenges to Indian Democracy:**
   a) Communalism Regionalism violence, criminalisation and corruption.
   b) Regional disparities, environmental degradation, illiteracy, Mass Poverty, Population Growth, caste oppressions and socio economics inequalities among backward classes.
Psychology

Psychology-Optional
Of Part A- Preliminary Examination of Civil Services Exam

1. Introduction to psychology:

2. Methods in Psychology:

3. Quantitative Analysis:

4. Physiological Psychology:

5. Development of human behaviour:

6. Perception:
Perceptual processes. Perceptual organisation. Perception of form, colour, depth and time. Perceptual readiness and constancy. Role of motivation, social and cultural factors in perception. Application of knowledge of perception to skill development (e.g. for certain jobs like that of driving, airline pilots etc.)

7. Learning:

8. Memory:
Physiological basis of memory. Memory and forgetting. Measurement of memory (Recall, Recognition, Relearning). Short term and long term memory. Theories of forgetting (Decay and interference theories and Repressive forgetting). Application of Memonic devices etc, to improving memory.
9. Cognition and Language:

10. Intelligence and Aptitude:

11. Motivation and Emotion:

12. Personality:
Concepts and Definition of personality. Study of personality (Trait, type and electric approaches) Development of personality (Freud, Erikson, Biological and socio-cultural determinants). Measurement of Personality (Proactive tests, pencil-paper tests). Application of personality profiles in fitting a person to a job.

13. Adjustment and Stress:

14. Social Behaviour:
Socio-cultural factors and behaviour. Development of attitudes, stereotypes and prejudice, Measurement of Attitudes (Thurstone, Likert attitude scale and Bogardus Social Distance scale). Strategies for reducing prejudice and changing attitude. Person perception, implicit personality theory and integrating impressions. Application of person perception to impression management.

15. Application of Psychology:

2. **Basic concepts and principles**: Organisation, hierarchy, Unity of command, Span of control, Authority and Responsibility, Co-ordination, Centralization and Decentralization, Delegation, Supervision, Line and Staff.

4. **Administrative Behaviour**: Decision making with special reference to H. Simon, communication and control, leadership theories. Theories of motivation (Maslow and Herzberg).

5. **Accountability and Control**: The concepts of Accountability and control: Legislative, executive and judicial control. Citizen and Administration: Role of civil society, people’s participation and Right to Information.

6. **Administrative Systems**: Comparative administrative features of USA, Great Britain, France and Japan.

7. **Personnel Administration**: Role of Civil Service in developing societies; position classification, Recruitment, Training, Promotion, Pay and Service conditions. Relations with the Political Executive; Administrative Ethics.

9. **Union Government and Administration in India. British legacy**: Constitutional context of Indian Administration; The President, Prime Minister and the Council of Ministers; Central Secretariat; Cabinet Secretariat, Prime Minister’s Office, Planning Commission; Finance Commission; Election Commission; Comptroller and Auditor-General of India. Public enterprises: Patterns, role performance and impact of liberalization.

10. **Civil Services in India**: Recruitment to All India and Central Services. Union Public Service Commission; Training of Civil Servants. Generalists and Specialists. Minister-Civil Servant relationship.

11. **State and District Administration**: Governor, Chief Minister, Secretariat, Chief
12. **Local Government:** Panchayati Raj and Urban local Government: Main features, structures, finances and problem areas. 73rd and 74th Constitutional Amendments.
Sociology

**Sociology-Optional**

of Part A – Preliminary Examination of Civil Services Exam

**Unit I : Basic Concepts :**

Society, community, association, institution. Culture-culture change, diffusion, Cultural-tag, Cultural relativism, ethnocentrism, acculturation.

Social Groups- primary, secondary and reference groups.

Social structure, social system, social action.

Status and role, role conflict, role set.

Norms and values- conformity and deviance.

Law and customs.

Socio-cultural processes:

socialisation, assimilation, integration, cooperation, competition, conflict, accommodation, Social distance, relative deprivation.

**Unit II : Marriage, Family and Kinship :**

Marriage : types and norms, marriage as contract, and as a sacrament.

Family : types, functions and changes.

Kinships : terms and usages, rules of residence, descent, inheritance.

**Unit III : Social Stratification :**

Forms and functions; Caste and Class. Jajmani system, purity and pollution, dominant caste, sanskritisation.

**Unit IV : Types of Society :**

Tribal, agrarian, industrial and post-industrial.

**Unit V : Economy and Society :**

Man, nature and social production, economic systems of simple and complex societies, non-economic determinants of economic behaviour, market (free) economy and controlled (planned) economy.
Sociology

Unit VI: Industrial and Urban Society:
Rural-Urban Continuum, urban growth and urbanisation-town, city and metropolis; basic features of industrial society; impact of automation on society; industrialisation and environment.

Unit VII: Social Demography:
Population size, growth, composition, and distribution in India; components of population growth—births, deaths and migration; causes and consequences of population growth; population and social development; population policy.

Unit VIII: Political Processes:
Power, authority and legitimacy; political socialisation; political modernisation, pressure groups; caste and politics.

Unit IX: Weaker Sections and Minorities:
Social justice—equal opportunity and special opportunity; protective discrimination; constitutional safeguards.

Unit X: Social Change:
Theories of change; factors of change; science, technology and change. Social movements—Peasant Movement, Women’s Movement, Backward Caste Movement, Dalit Movement.
Probability

Random experiment, sample space, event, algebra of events, probability on a discrete, sample space, basic theorems of probability and simple examples based there on, conditional probability of an event, independent events, Bayes’ theorem and its application, discrete and continuous random variables and their distributions, expectation, moments, moment generating function, joint distribution of two or more random variables, marginal and conditional distributions, independence of random variables, covariance, correlation, coefficient, distribution of function of random variables. Bernoulli, binomial, geometric, negative binomial, hypergeometric, Poisson, multinomial, uniform, beta, exponential, gamma, Cauchy, normal, long normal, and bivariate normal distributions, real-life situations where these distributions provide appropriate models, Chebyshev’s inequality, weak law of large numbers and central limit theorem for independent and identically distributed random variables with finite variance and their simple applications.

Statistical Methods

Concept of a statistical population and a sample, types of data, presentation and summarization of data, measures of central tendency, dispersion, skewness and kurtosis, measures of association and contingency, correlation, rank correlation, intra class correlation, correlation ratio, simple and multiple linear regression, multiple and partial correlations (involving three variables only), curve-fitting and principle of least squares, concepts of random sample, parameter and statistic, Z, X2, t and F statistics and their properties and applications, distributions of sample range and median (for continuous distributions only), censored sampling (concept and illustrations).

Statistical Inference

Simple and composite hypotheses, two kinds of errors, level of significance, size and power of a test, desirable properties of a good test, most powerful test, Neyman-Pearson lemma and its use in simple example, uniformly most powerful test, likelihood ratio test and its properties and applications.

Chi-square test, sign test, Wald-Wolfowitz runs test, run test for randomness, median test, Wilcoxon test and Wilcoxon-Mann-Whitney test.

Wal’s sequential probability ratio test, OC and ASN functions, application to binomial and normal distributions.

Loss function, risk function, minimax and Bayes rules.
Statistics

Sampling Theory and Design of Experiments

Complete enumeration vs. sampling, need for sampling, basic concepts in sampling, designing large-scale sample surveys, sampling and non-sampling errors, simple random sampling, properties of a good estimator, estimation of sample size, stratified random sampling, systematic sampling, cluster sampling, ratio and regression methods of estimation under simple and stratified random sampling, double sampling for ratio and regression methods of estimation, two-stage sampling with equal-size first-stage units.

Analysis of variance with equal number of observations per cell in one, two and three-way classifications, analysis of covariance in one and two-way classifications, basic principles of experimental designs, completely randomized design, randomized block design, latin square design, missing plot technique, $2^n$ factorial design, total and partial confounding, $3^2$ factorial experiments, spin-plot design and balanced incomplete block design.
I. Cell structure and function:
   (a) Prokaryote and eukaryote.

   (b) Structure of animal cell, structure and functions of cell organelles.

   (c) Cell-cycle- mitosis, meiosis.

   (d) Structure and contents of nucleus including nuclear membrane, structure of chromosome and gene, chemistry of genetic components.

   (e) Mendel's laws of inheritance, linkage and genetic recombination; cytoplasmic inheritance.

   (f) Function of gene: replication, transcription and translation; mutations (spontaneous and artificial); Recombinant DNA: principle and application.

   (g) sex determination in Drosophila and man; sex linkage in man.

II. Systematics:

   (a) Classification of non-chordates (up to sub- classes) and chordates (up to orders) giving general features and evolutionary relationship of the following phyla:

   Protozoa, Porifera, Coelenterata, Platyhelminthes, Nemathelminthes, Annelida, Arthropoda, Mollusca, Echinodermata, Minor Phyla (Bryozoa, Phoronida and Chaetognatha) and Hemichordata.

   (b) Structure reproduction and life history of the following types:

   (c) Classification of chordates (up to orders), giving general features and evolutionary relationship of the following:

   Protochordata; Agnatha; Gnathostomata-Pisces, Amphibia, Reptilia, Aves and Mammalia.

   (d) Comparative functional anatomy of the following based on type animals (Scoliodon, Rana, Calotes, Columba and Oryctolagus): integument and its derivatives, endoskeleton, digestive system, respiratory system, circulatory system including heart and aortic arches, urinogenital system; brain and sense organs (eye and ear); endocrine glands and other hormone producing structures, (Pituitary, thyroid, parathyroid, adrenal, pancreas, gonads) their functions.
Zoology

III. Vertebrate Physiology and Biochemistry:

(a) Chemical composition of protoplasm; nature and function of enzymes; vitamins, their sources and role; colloids and hydrogen ion concentration; biological oxidation, electron transport and role of ATP, energetics, glycolysis, citric acid cycle; vertebrate hormones: their type, sources and functions; pheromones and their role.

(b) Neuron and nerve impulse-conduction and transmission across synapses; neurotransmitters and their role, including acetyl cholinesterase activity.

(c) Homeostasis; osmoregulation; active transport and ion pump.

(d) Composition of carbohydrates, fats, lipids and proteins; steroids.

IV. Embryology:

(a) Gametogenesis, fertilization, cleavage; gastrulation in frog and chick.

(b) Metamorphosis in frog and regressive metamorphosis in ascidian; extra-embryonic membranes in chick and mammal; placentation in mammals; Biogenetic law.

V. Evolution:

(a) Origin of life; principles, theories and evidences of evolution; species concept.

(b) Zoogeographical realms, insular fauna; geological eras.

(c) Evolution of man; evolutionary status of man.

VI. Ecology, Wildlife and Ethology:

(a) Abiotic and biotic factors; concept of ecosystem, food chain and energy flow; adaptation of aquatic, terrestrial and aerial fauna; intra and inter-specific animal relationships; environmental pollution: Types, sources, causes, control and prevention.

(b) Wildlife of India; endangered species of India; sanctuaries and national parks of India.

(c) Biological rhythms.

VII. Economic Zoology:

(a) Beneficial and harmful insects including insect vectors of human diseases.

(b) Industrial fish, prawn and molluscs of India.

(c) Non-poisonous and poisonous snakes of India.

(d) Venomous animals-centipede, wasp, honey bee.

(e) Diseases caused by aberrant chromosomes/genes in man; genetic counselling; DNA as tool for forensic investigation.
PART – B

The main Examination will consist of the following papers :-

<table>
<thead>
<tr>
<th>(a)</th>
<th>Paper</th>
<th>Subject</th>
<th>Marks</th>
</tr>
</thead>
<tbody>
<tr>
<td>I</td>
<td></td>
<td>English</td>
<td>300</td>
</tr>
<tr>
<td>II</td>
<td></td>
<td>Essay</td>
<td>200</td>
</tr>
<tr>
<td>III &amp; IV</td>
<td></td>
<td>General Studies</td>
<td>300 each paper</td>
</tr>
<tr>
<td>V, VI, VII &amp; VIII</td>
<td>Any of the subjects to be selected from the list of optional subjects. Each subject will have two papers.</td>
<td>300 each paper</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Total</td>
<td></td>
<td>2300 Marks</td>
</tr>
<tr>
<td>(b)</td>
<td>Interview Test</td>
<td></td>
<td>250 Marks</td>
</tr>
</tbody>
</table>

List of optional subjects :-

Candidates will not be allowed to offer the following combination of subjects :-

(a) Political Science and International Relations and Public Administration.
(b) Commerce and Accountancy and Management.
(c) Anthropology and Sociology.
(d) Mathematics and Statistics.
(e) Agriculture and Animal Husbandry & Veterinary Science.
(f) Management and Public Administration.
(g) Of the the Engineering subject viz Civil Engineering, Electrical Engineering and Mechanical Engineering – Not more than one subject.
(h) Animal Husbandry & Veterinary Science and Medical Science.

The Question papers for the Examination will be of conventional (essay) type.
Detailed Syllabus.
General Studies – Compulsory
of Part B – Main Examination of Civil Services Exam

The nature and standard of questions in these papers will be such that a well-educated person will be able to answer them without any specialised study. The questions will be such as to test a candidate’s general awareness of a variety of subjects, which will have relevance for a career in Civil Services.

Paper – I

(a) History of Modern India and Indian Culture

The History of Modern India will cover history of the Country from about the middle of nineteenth century and would also include questions on important personalities who shaped the Freedom Movement and Social reforms. The part relating to Indian Culture will cover all aspects of Indian Culture from the ancient to modern times.

(b) Geography of India.

In this part, questions will be on the physical, economic and social geography of India.

(c) Indian Polity

This part will include questions on the Constitution of India, Political system and related matters.

(d) Current National issues and topics of social relevance

This part is intended to test the candidate’s awareness of current national issues and topics of social relevance in the present day India, such as the following.

- Demography & Human Resource & related issues. Behavioural & Social issues & Social Welfare problems, such as Child labour, gender equality, adult literacy, rehabilitation of the handicapped and other deprived segments of the society, drug abuse, public health, etc.

- Law enforcement issues, human rights, corruption in public life, communal harmony, etc.

- Internal Security and related issues.

- Environmental issues, ecological preservation conservation of natural resources and national heritage.

- The role of national institutions, their relevance and need for change.

Paper – II

(a) India and the World

This part is intended to test candidate’s awareness of India’s relationship with the world in various spheres, such as the following :-

Foreign Affairs
General Studies

External Security and related matters.

Nuclear Policy

Indians abroad

(b) Indian Economy

In this part, questions will be on the planning and economic development in India, economic and trade issues, Foreign Trade, the role and functions of I.M.F., World Bank, W.T.O. etc.

(c) International Affairs and Institutions

This part will include questions on important events in world affairs and on international institutions.

(d) Developments in the field of science and technology, communications and space.

In this part, questions will test the candidate’s awareness of the developments in the field of science & technology, communications and space and also basic ideas of computers.

(e) Statistical analysis, graphs and diagrams.

This part will include exercises to test the candidate’s ability to draw common sense conclusions from information presented in statistical, graphical or diagrammatical form and to point out deficiencies, limitations or inconsistencies therein.
Agriculture

Agriculture - Optional
of Part B – Main Examination of Civil Services Exam

Paper – I

Ecology and its relevance to man, natural resources, their sustainable management and conservation. Physical and Social environment as factors of crop distribution and production. Climatic elements as factors of crop growth, impact of changing environment on cropping pattern as indicators of environments. Environmental pollution and associated hazards to crops, animals, and humans.

Cropping pattern in different agro-climatic zones of the country. Impact of high-yielding and short-duration varieties on shifts in cropping pattern. Concepts of multiple cropping, multi-storey, relay and inter-cropping, and their importance in relation to food production. Package of practices for production of important cereals, pulses, oil seeds, fibres, sugar, commercial and fodder crops grown during Kharif and Rabi seasons in different regions of the country.

Important features, scope and propagation of various types of forestry plantations such as extension, social forestry, agro-forestry and natural forests.

Weeds, their characteristics, dissemination and association with various crops; their multiplication; cultural, biological and chemical control of weeds.

Soil conservation planning on watershed basis. Erosion and run-off management in hilly, foot hills, and valley lands; processes and factors affecting them. Dryland agriculture and its problems. Technology of stabilising agriculture production in rainfed agriculture area.

Water-use efficiency in relation to crop production, criteria for scheduling irrigations, ways and means of reducing run-off losses of irrigation water. Drip and sprinkler irrigation. Drainage of eater-logged soils, quality of irrigation water, effect of industrial effluents on soil and water pollution.

Farm management, scope, important and characteristics, farm planning. Optimum resources use and budgeting. Economics of different types of farming systems.

Marketing and pricing of agricultural inputs and outputs, price fluctuations and their cost; role of cooperatives in agricultural economy; types and systems of farming and factors affecting them.

Agriculture extension kits importance and role, methods of evaluation of extension programmes, socio-economic survey and status of big, small, and marginal farmers and landless agricultural labourers; farm mechanization and its role in agricultural production and rural employment. Training programmes for extension workers; lab-to-land programmes.
Agriculture

Paper – II

Seed technology, its importance. Different kinds of seeds and their seed production and processing techniques. Role of public and private sectors in seed production, processing and marketing in India.

Physiology and its significance in agriculture. Imbibition, surface tension, diffusion and osmosis. Absorption and translocation of water, transpiration and water economy.

Enzymes and plant pigments; photosynthesis-modern concepts and factors affecting the process, aerobic and nonaerobic respiration; C, C and CAM mechanisms. Carbohydrate, protein and fat metabolism.

Growth and development; photoperiodism and vernalization. Auxins, hormones, and other plant regulators and their mechanism of action and importance in agriculture. Physiology of seed development and germination; dormancy.

Climatic requirements and cultivation of major fruits, plants, vegetable crops and flower plants; the package of practices and their scientific basis. Handling and marketing problems of fruit and vegetables. Principal methods of preservation of important fruits and vegetable products, processing techniques and equipment. Role of fruits and vegetables in human nutrition. Raising of ornamental plants, and design and layout of lawns and gardens.

Diseases and pests of field vegetables, orchard and plantation crops of India. Causes and classification of plant pests and diseases. Principles of control of plant pests and diseases Biological control of pests and diseases. Integrated pest and disease management. Epidemiology and forecasting.

Storage pests and diseases of cereals and pulses, and their control.

Food production and consumption trends in India. National and international food policies. Production, procurement, distribution and processing constraints. Relation of food production to national dietary pattern, major deficiencies of calorie and protein.

1.2 Minerals in animal diet: Sources, functions, requirements and their relationship of the basic mineral nutrients including trace elements.

1.3 Vitamins, Hormones and Growth Stimulating, substances: Sources, functions, requirements and inter-relationship with minerals.

1.5 Advances in Non Ruminant Nutrition-Poultry-Nutrients and their metabolism with reference to poultry, meat and egg production, Nutrient requirements and feed formulation and broilers at different ages.

1.6 Advances in Non-Ruminant Nutrition-Swine-Nutrients and their metabolism with special reference to growth and quality of meat production. Nutrient requirements and feed formulation for baby-growing and finishing pigs.

2. Animal Physiology

2.2 Milk Production and Reproduction and Digestion: Current status of hormonal control of mammary development, milk secretion and milk ejection. Male and Female reproduction organ, their components and function. Digestive organs and their functions.

2.3 Environment Physiology: Physiological relations and their regulation; mechanisms of adaption, environmental factors and regulatory mechanism involved in animal behaviour, methods of controlling climatic stress.

Detection of oestrus and time of insemination for better conception.

3. Livestock Production and Management: 3.1 Commercial Dairy Farming: Comparison of dairy farming in India with advanced countries. Dairying under fixed farming and as a specialised farming., economic dairy farming, Starting of a dairy farm. Capital and land requirement, organisation of the dairy farm.

Procurement of goods; opportunities in dairy farming, factors determining the efficiency of dairy farming. Herd recording, budgeting, cost of milk production; pricing policy; Personnel Management. Developing Practical and Economic ration for dairy cattle; supply of greens throughout the year, field and fodder requirements of Dairy Farm, Feeding regimes for day and young stock and bulls, heifers and breeding animals, new trends in feeding young and adult stock; Feeding records.

3.3. Feeding and management of animals under drought, flood and other natural calamities.

4. Genetics and Animal Breeding: Mitosis and Meiosis; Mendelian inheritance; deviations to Mendelian genetics; Expression of genes; Linkage and crossing over; Sex determination, sex influenced and sex limited characters; Blood groups and polymorphism; Chromosome aberrations; Gene and its structure; DNA as a genetic material; Genetic code and protein synthesis; Recombinant DNA technology, Mutations, types of mutations, methods for detecting mutations and mutation rate.

4.1. Population Genetics Applied to Animal Breeding: Quantitative Vs qualitative traits; Hardy Weinberg Law; Population Vs individual; Gene and genotypic frequency; Forces changing gene frequency; Random drift and small populations; Theory of path coefficient; Inbreeding, methods of estimating inbreeding coefficient, systems of inbreeding, Effective population size; Breeding value, estimation of breeding value, dominance and epistatic deviation; partitioning of variation; Genotype X environment correlation and genotype X environment interaction; Role of multiple measurements; Resemblance between relatives.

4.2. Breeding Systems: Heritability, repeatability and genetic and phenotypic correlations, their methods of estimation and precision of estimates; Aids to selection and their relative merits; Individual, pedigree, family and within family selection; Progeny testing; Methods of selection; Construction of selection indices and their uses; Comparative evaluation of genetic gains through various selection methods; Indirect selection and Correlated response; Inbreeding, upgrading, cross-breeding and synthesis of breeds; Crossing of inbred lines for commercial production; Selection for general and specific combining ability; Breeding for threshold character.
1.1. **Histology and Histological Techniques**: Stains-Chemical classification of stains used in biological work- principles of staining tissues- mordants- progressive and regressive stains- differential staining of cytoplasmic and connective tissue elements- Methods of preparation and processing of tissues- celloidin embedding- Freezing microtomy- Microscopic- Bright field microscope and electron microscope. Cytology-structure of cell, organelles & inclusions; cell division –cell types- Tissues and their classification-embryonic and adult tissues- Comparative histology of organs:- vascular, Nervous, digestive, respiratory, musculo- skeletal and urogenital systems- Endocrine glands- Integuments- sense organs.

1.3. **Bovine Anatomy-Regional Anatomy**: Paranasal sinuses of OX- surface anatomy of salivary glands. Regional anatomy of infraorbital, maxillary, mandibuloalveolar, mental and coronal nerve block- Regional anatomy of paravertebral nerves, pudental nerve, median, ulnar & radial nerves- tibial, fibular and digital nerves- Cranial nerves- structures involved in epidural anaesthesia- superficial lymph nodes- surface anatomy of visceral organs of thoracic, abdominal and pelvic cavities- comparative features of locomotor apparatus & their application in the biomechanics of mammalian body.

1.4. **Anatomy of Fowls**: Musculo- skeletal system-functional anatomy in relation to respiration and flying, digestion and egg production.

1.5. **Physiology of blood and its circulation, respiration; excretion, Endocrine glands in health and disease.**

1.5.1 **Blood constituents**: Properties and functions- blood cell formation- Haemoglobin synthesis and chemistry-plasma proteins production, classification and properties; coagulation of blood; Haemorrhagic disorders- anticoagulants- blood groups- Blood volume-Plasma expanders-Buffer systems in blood. Biochemical tests and their significance in disease diagnosis.

1.5.2 **Circulation**: Physiology of heart, cardiac cycle- heart sounds, heart beat, electrocardiograms, Work and efficiency of heart- effect of ions on heart function- metabolism of cardiac muscle, nervous and chemical regulation of heart, effect of temperature and stress on heart, blood pressure and hypertension, Osmotic regulation, arterial pulse, vasomotor regulation of circulation, shock. coronary & pulmonary circulation, Blood-Brain barrier- Cerebrospinal fluid- circulation in birds.

1.5.3. **Respiration**: Mechanism of respiration, Transport and exchange of gases-neural control of respiration- chemo receptors- hypoxia- respiration in birds.

1.5.5. **Endocrine glands**: Functional disorders, their symptoms and diagnosis. Synthesis of hormones, mechanism and control of secretion- hormonal receptors- classification and function.
Animal Husbandry and Veterinary Science

1.6. **General knowledge of pharmacology and therapeutics of drugs:** Celluar level of pharmaodynamics and pharmaco-kinetics-Drugs acting on fluids and electrolyte balance-drugs acting on Autonomic nervous system- Modern concepts of anaesthesia and dissociative anaesthetics-Antimicrobials and principles of chemotherapy in microbial injections- use of hormones in therapeutics-chemotherapy of parasitic infections-Drug and economic persons in the Edible tissues of animals-chemotherapy of Neoplastic diseases.

1.7. **Veterinary Hygiene with reference to water, air and habitation:** Assessment of pollution of water, air and soil-Importance of climate in animal health-effect of environment on animal function and performance- relationship between industrialisation and animal agriculture- animal housing requirements for specific categories of domestic animals viz. pregnant cows & sows, milking cows, broiler birds-stress, strain & productivity in relation to animal habitation.

2. **Animal Diseases:**

2.1. Pathogenesis, symptoms, postmortem lesions, diagnosis and control of infection diseases of cattle, pigs and poultry, horses, sheep and goats.

2.2. Etiology, symptoms, diagnosis, treatment of production diseases of cattle, pigs and poultry.

2.3. Deficiency diseases of domestic animals and birds.

2.4. Diagnosis and treatment of nonspecific condition like impaction, Bloat, Diarrhoea, Indigestion, dehydration, stroke, poisoning.

2.5. Diagnosis and treatment of neurological disorders.

2.7. Anaesthesia-local,regional and general- preanaesthetic medication, Symptoms and surgical interference in fractures and dislocation, Hernia, choking, abomassal displacement- Caesarian operations, Rumenotomy- Castrations.

3. **Veterinary Public Health**

3.1. **Zoonoses:** Classification, definition; role of animals and birds in prevalence and transmission of zoonotic diseases-occupational zoonotic diseases.

3.2. **Epidemiology:** Principles, definition of epidemiological terms, application of epidemiological measures in the study of diseases and disease control, Epidemiological features of air, water and food borne infections.

Animal Husbandry and Veterinary Science

4. Milk and Milk Products Technology:

Quality, testing and grading raw milk, Quality storage grades of whole milk, Skimmed milk and cream.

Processing, packaging, storing, distributing, marketing defects and their control and nutritive properties of the following milks: Pasteurized, standardized, toned, double toned, sterilized, homogenized, reconstituted, recombined and flavoured milks. Preparation of cultured milks, cultures and their management, youghurt, Dahi, Lassi and Srikhand. Preparation of flavoured and sterilized milks. Legal standards, Sanitation requirement for clean and safe milk and for the milk plant equipment.

4.2. Milk Products Technology: Selection of raw materials, assembling, production, processing, storing, distributing and marketing milk products such as Butter, Ghee, Khoa, Channa, Cheese; Condensed, evaporated, dried milk and baby food; Ice cream and Kulfi; by products; whey products, butter milk, lactose and casein. Testing Grading, judging milk products-BIS and Agmark specifications, legal standards, quality control nutritive properties. Packaging, processing and operational control Costs.

5. Meat Hygiene and Technology:

5.1. Meat Hygiene:

5.1.1 Ante mortem care and management of food animals, stunning, slaughter and dressing operations; abattoir requirements and designs; Meat inspection procedures and judgement of carcass meat cuts- grading of carcass meat cuts- duties and functions of Veterinarians in Wholesome meat production.

5.1.2. Hygienic methods of handling production of meat-spoilage of meat and control measures- Post slaughter physiochemical changes in meat and factors that influence them-quality improvement methods-Adulteration of meat and defection-Regulatory provisions in Meat trade and Industry.

5.2. Meat Technology:

5.2.1. Physical and chemical characteristics of meat- meat emulsions-methods of preservations of meat-curing, canning, irradiation, packaging of meat and meat products; meat products and formulations.

5.3. By products: Slaughter house by products and their utilisation-Edible and inedible byproducts-social and economic implications of proper utilisation of slaughter house by products-Organ products for food and pharmaceuticals.

Animal Husbandry and Veterinary Science

Problems of constraints in transfer of technology. Animal husbandry programmes for rural development.
1.1 Meaning and scope Anthropology

1.2 Relationship with other disciplines: History, Economics, Sociology, Psychology, Political Science, Life Science, Medical Science.

1.3 Main branches of Anthropology, their scope and relevance.
   a) Social-cultural Anthropology
   b) Physical and biological Anthropology
   c) Archaeological Anthropology

1.4 Human Evolution and emergence of Man.

Organic Evolution - Theories of evolution in historical perspective, pre-Darwinian, Darwinia and Post-Darwinian period. Modern synthetic theory of evolution; brief outline of terms and concepts of evolutionary biology (Doll’s rule, Cope’s rule, Gause’s rule, parallelism, convergence, adaptive radiation, mosaic revolution); Principles of systematics and taxonomy, major primate taxa, tertiary and quaternary fossil primates, Systematics of Hominoidae and Hominidae, Origin and evolution of man-‘Homo erectus and Homo sapiens’.

1.5 Phylogenetic status, characteristics and distribution of the following:
   a) Prepleistocene fossil primates- Oreopithecus.
   b) South and East African hominids-Plesianthropus/ Australopithecus Africaus, Paranthropus, Australopithecus.
   c) Paranthropus-Homo erectus-Homo erectus javanicus, Homo erectus pekinensis.
   d) Homo Heidelbergensis.
   e) Neanderthal man-La-chapelle-aus-saints (Classical type), Mt. Carmelites types (Progressive type).
   f) Rhodesian man
   g) Homo sapiens-Cromognon, Grimaldi, Chancelede.

Recent advances in understanding the evolution, distribution and multidisciplinary approach to understand a fossil type in relation to others.

1.6 Evolutionary trend and classification of the order Primates, Relationship with other mammals,
Anthropology

molecular evolution of Primates, Comparative anatomy of man and apes, primate locomotion; terrestrial and arboreal adaptation, skeletal changes due to erect posture and its implications.

1.7 Cultural Evolution- broad outlines of pre-historic cultures:

a) Paleolithic
b) Mesolithic
c) Neolithic
d) Chalcolithic
e) Copper-Bronze age
f) Iron age

2.1 Family- Definition and typology of family, household and domestic groups. Basic structure and functions; stability and changes in family. Typological and processual approaches to the study of family. Impact of urbanization, industrialization, education and feminist movements. University of family-a critique.

2.3 Marriage: Definition, types and variations of marriage systems. Debates on the universal definition of marriage. Regulation of marriage-preferential, prescriptive, proscriptive and open systems. Types and form of marriage Dowry, bride-price, pestation and marriage stability.

3.1 Study of culture, patterns and processes. Concept of culture, patterns of culture, relationships between culture and civilization and society.

3.2 Concept of Social Change and Cultural Change:

3.4 Concept of Society.

3.5 Approaches to the study of culture and society-classical evolutionism, neo-evolutionism, culture ecology, historical particularism and diffusionism, structural-functionalism, culture and personality, transactionalism, symbolism, cognitive approach and new ethnography, post structuralism and post-modernism.

Anthropology

and processual Relation with economic and political structures.

5.2 Theoretical foundations. Types of political organisations-band, tribe, chiefdom, state, concept of power, authority and legitimacy. Social control, law and justice in tribal and peasant societies.

8.1 Concept, scope and major branches of human genetics. Its relationship with other branches of science and medicine.

8.2 Method for study of genetic principles in man-family study (pedigree analysis, twin study, foster child, co-twin method, cytogenetic method, chromosomal and karyotype analysis), biochemical methods, immunological methods, D.N.A. technology and recombinant technologies.

8.3 Twin-study method-zygosity, heritability estimates, present status of the twin method and its applications.

8.4 Mendelian genetics in man-family study, single factor, multifactor, lethal, sub-lethal, and polygenic inheritance in man.

8.5 Concept of genetic polymorphism and selection, Mendelian population, Hardy-Weinberg law; causes and changes which bring down frequency-mutation, isolation, migration, selecton, inbreeding and genetic drift. Consanguineous and non-consanguineous mating, genetic load, genetic effect of consanguineous and cousin marriages (statistical and probability methods for study of human genetics).

8.6 Chromosomes and chromosomal aberrations in man, methodology.

a) Numerical and structural aberrations (disorders).

b) Sex chromosomal aberrations-Klinefelter (XXY), Turner (XO), Super female (XXX), intersex, and other syndromic disorders.

Anthropology

8.7 Concept of race in historical and biological perspective. Race and racism, biological basis of morphological variation of non-metric and metric characters. Racial criteria, racial traits in relation to heredity and environment; biological basis of racial classification, racial differentiation and race- crossing in man.

8.8 Ethnic groups of mankind-characteristics and distribution in world, racial classification of human groups. Principal living peoples of world. Their distribution and characteristics.

8.9 Age, sex and population variation in genetic marker-ABO, Rh blood groups, HLA, Hp, transferrin, Gm, blood enzymes. Physiological characteristics-Hb level, body fat, pulse rate, respiratory functions and sensory perceptions in different cultural and socio-economic groups. Impact of smoking air pollutions, alcoholism, drugs and occupational hazards on health.

10.1 Relevance in understanding of contemporary society. Dynamics of ethnicity at rural, tribal, urban and international levels. Ethnic conflicts and political developments. Concept of ethnic boundaries. Ethnicity and concept of nation state.

11.1 Concept of human growth and development-stages of growth-prenatal, natal, infant, childhood, adolescence, maturity, senescence.

Factors affecting growth and development genetic, environment, biochemical, nutritional, cultural and socio-economic.

12.2 Demographic theories-biological, social and cultural.

12.3 Demographic methods-census, registration system, sample methods, duel reporting system.

12.4 Population structures and population dynamics.

12.5 Demographic rates and ratios, life table-structure and utility.

12.6 Biological and socio-ecological factors influencing fecundity, fertility natality and mortality.

12.7 Methods of studying population growth.

12.8 Biological consequences of population control and family welfare.
Anthropology

13.1 Anthropology of sports
13.2 Nutritional Anthropology
13.3 Anthropology in designing of defence and other equipments.
13.4 Forensic Anthropology.
13.5 Methods and principles of personal identification and reconstruction.
13.6 Applied human genetics-Paternity diagnosis genetic counselling and eugenics.
13.7 DNA technology-prevention and cure of diseases.
13.8 Anthropo-genetics in medicine.
13.9 Serogenetics and cytogenetics in reproductive biology.
13.10 Application of statistical principles in human genetics and Physical Anthropology.

Paper II

2. Demographic profile of India-Ethnic and linguistic elements in the Indian population and their distribution. Indian population, factors influencing its structure and growth.

4. Emergence, growth and development of anthropology in India-contributions of the 19th Century and early 20th Century scholar-administrators. Contributions of Indian anthropologists to tribal and caste studies. Contemporary nature of anthropological studies in India.

5. Approaches to the study of Indian society and culture-traditional and contemporary.

5.1 Aspects of Indian village-Social organisations of agriculture, impact of market economy on Indian villages.

5.2 Linguistic and religious minorities-social, political and economic status.

5.3 Tribal situation in India-biogenetic variability, linguistic and socio-economic characteristics of the tribal populations and their distribution. Problems of the tribal Communities-land alienation, poverty indebtedness, low literacy, poor educational facilities, unemployment, health and nutrition. Developmental projects-tribal displacement and problems of rehabilitation:

Development of forest policy and tribals, Impact of urbanisation and industrialization on tribal and rural populations.
Anthropology

8. Social change among the tribes during colonial and post-Independent India.

8.1 Impact of Hinduism, Christianity, Islam and other religious on tribal societies.

8.2 Tribe and nation state-a comparative study of tribal communities in India and other countries.

9. History of administration of tribal areas, tribal policies, plans, programmes of tribal development and their implementation. Role of N.G.Os.

9.1 Role of anthropology in tribal and rural development.

9.2 Contributions of anthropology to the understanding of regionalism, communalism and ethnic and political movements.
BOTANY-Optional
of part B – Main examination of Civil Services Exam

PAPER-I

1. Microbiology and Plant Pathology: Viruses, bacteria, and plasmids-structure and reproduction. General account of infection, Phytoimmunology. Applications of microbiology in agriculture, industry, medicine and pollution control in air, soil and water.

Important plant diseases caused by viruses, bacteria, mycoplasma, fungi and nematodes. Mode of infection and dissemination Molecular basis of infection and disease resistance/defence. Physiology of parasitism and control measures. Fungal toxins.

Angiosperms: Systematics, anatomy, embryology, palynology and phylogeny.

Comparative account of various systems of Angiosperm Classification. Study of angiospermic families-Magnoliaceae, Ranunculaceae, Brassicaceae (Cruci-ferae), Rosaceae, Leguminosae, Euphorbiaceae, Malvaceae, Dipterocar-paceae, Apiaceae (Umbelliferae), Asclepiadaceae, Verbenaceae, Solana-ceae, Rubiaceae, Cucurbitaceae, Asteraceae (Composite), Poaceae (Gramineae), Arecaceae (Palmae), Liliaceae, Musaceae, Orchidaceae.

4. Plant Utility and Exploitation:

Origin of cultivated plants, Vavilov’s centres of origin. Plants as sources for food, fodder, fibres, spices, beverages, drugs, narcotics, insecticides, timber,gums, resins and dyes.

PAPER-II

1. Cell Biology: Techniques of Cell Biology. Prokaryotic and eukaryotic cells- structural and

Organic evolution-evidences, mechanism and theories. Role of RNA in origin and evolution.

1. Atomic structure

Quantum theory, Heisenberg’s uncertainty principle, Schrodinger wave equation (time independent). Interpretation of wave function, particle in one-dimentional box, quantum numbers, hydrogen atom wave functions. Shapes of s, p and d orbitals.

2. Chemical bonding

Ionic bond, characteristics of ionic compounds, factors affecting stability of ionic compounds, lattice energy, Born-Haber cycle; covalent bond and its general characteristics, polarities of bonds in molecules and their dipole moments. Valence bond theory, concept of resonance and resonance energy. Molecular orbital theory (LCAO method); bonding in homonuclear molecules: H2+, H2 to Ne2, NO, CO, HF, CN, CN-, BeH2 and CO2. Comparison of valence bond and molecular orbital theories, bond order, bond strength and bond length.

3. Solid State

4. The gaseous state

Equation of state for real gases, intermolecular interactions, liquefication of gases and critical phenomena, Maxwell’s distribution of speeds, intermolecular collisions, collisions on the wall and effusion.

5. Thermodynamics and statistical thermodynamics

Thermodynamics systems, states and processes, work, heat and internal energy; first law of thermodynamics, work done on the systems and heat absorbed in different types of processes; calorimetry, energy and enthalpy changes in various processes and their temperature dependence.

Second law of thermodynamics; entropy as a state function, entropy changes in various process, entropy-reversibility and irreversibility. Free energy functions; criteria for equilibrium, relation between equilibrium constant and thermodynamic quantities; Nernst heat theorem and third law of thermodynamics.

Micro and macro states; canonical ensemble and canonical partition function; electronic, rotational and
Vibrational partition functions and thermodynamic quantities; chemical equilibrium in ideal gas reactions.

6. Phase equilibria and solutions

Phase equilibria in pure substances; Clausius-Clapeyron equation; phase diagram for a pure substance; phase equilibria in binary systems, partially miscible liquids- upper and lower critical solution temperatures; partial molar quantities, their significance and determination; excess thermodynamic functions and their determination.

7. Electrochemistry

Debye-Huckel theory of strong electrolytes and Debye-Huckel limiting Law for various equilibrium and transport properties.

Galvanic cells, concentration cells; electrochemical series, measurement of e.m.f. of cells and its applications, fuel cells and batteries.

Processes at electrodes; double layer at the interface; rate of charge transfer, current density; overpotential; electroanalytical techniques-voltameter, polarography, ampero-metry, cyclic-voltametry, ion selective electrodes and their use.

8. Chemical kinetics

Concentration dependence of rate of reaction; differential and integral rate equations for zeroth, first, second and fractional order reactions. Rate equations involving reverse, parallel, consecutive and chain reactions; effect of temperature and pressure on rate constant. Study of fast reactions by stop-flow and relaxation methods. Collisions and transition state theories.

9. Photochemistry

Absorption of light; decay of excited state by different routes; photochemical reactions between hydrogen and halogens and their quantum yields.

10. Surface phenomena and catalysis

Absorption from gases and solutions on solid adsorbents, absorption isotherms,-Langmuir and B.E.T. isotherms ; determination of surface area, characteristics and mechanism of reaction on heterogeneous catalysts.

11. Bio-inorganic chemistry

Metal ions in biological systems and their role in ion-transport across the membrane (molecular mechanism), ionophores, photosynthesis-PSI, PSII; nitrogen fixation, oxygen-uptake proteins, cytochromes and ferredoxins.

12. Coordination chemistry

(a) Electronic configurations; introduction to theories of bonding in transition metal complexes. Valence bond theory, crystal field theory and its modifications; applications of theories in the explanation of magnetism and electronic spectra of metal complexes.
(b) Isomerism in coordination compounds. IUPAC nomenclature of coordination compounds; stereochemistry of complexes with 4 and 6 coordination numbers; chelate effect and polynuclear complexes; trans effect and its theories; kinetics of substitution reactions in square-planer complexes; thermodynamic and kinetic stability of complexes.

(c) Synthesis and structures of metal carbonyls; carboxylate anions, carbonyl hydrides and metal nitrosyl compounds.

(d) Complexes with aromatic systems, synthesis, structure and bonding in metal olefin complexes, alkyne complexes and cyclopentadienyl complexes; coordinative unsaturation, oxidative addition reactions, insertion reactions, fluxional molecules and their characterization. Compounds with metal-metal bonds and metal atom clusters.

13. General chemistry of ‘f’ block elements

Lanthanides and actinides; separation, oxidation states, magnetic and spectral properties; lanthanide contraction.

14. Non-Aqueous Solvents

**Paper-II**

1. **Delocalised covalent bonding:** Aromaticity, anti-aromaticity; annulenes, azulenes, tropolones, kekulene, fulvenes, sydnones.

2 (a) **Reaction mechanisms:** General methods (both kinetic and non-kinetic) of study of mechanism or organic reactions illustrated by examples-use of isotopes, cross-over experiment, intermediate trapping, stereochemistry; energy diagrams of simple organic reactions-transition states and intermediates; energy of activation; thermodynamic control and kinetic control of reactions.

(b) **Reactive intermediates:** Generation, geometry, stability and reactions of carbonium and carbonium ions, carbonions, free radicals, carbenes, benzynes and niternes.

(c) **Substitution reactions:** SN1, SN2, SNI, SN1/, SN2/, SNI/ and SRN1 mechanisms; neighbouring group participation; electrophilic and nucleophilic reactions of aromatic compound including simple heterocyclic compounds- pyrrole, furan thiophene, indole.

(d) **Elimination reactions:** E1, E2 and E1 cb mechanism, orientation in E2 reactions- Saytzeff and Hoffmann; pyrolytic syn elimination-acetate pyrolysis, Chugaev and Cope eliminations.

(e) **Addition reactions:** Electrophilic addition to C=C and C=O; nucleophilic addition to C=O, C=N, conjugated olefins and carbonyls.

(f) **Rearrangements:** Pinacol-pinacolone, Hoffmann, Beckmann, Baeyer-Villiger, Favorskii, Fries, Claisen, Cope, Stevens and Wagner-Meerwein rearrangements.

3. **Pericyclic reactions:** Classification and examples; Woodward-Hoofmann rules- electrocyclic reactions, cycloaddition reactions [2+2 and 4+2] and sigmatropic shifts [1, 3; 3, 3 and 1, 5] FMO
approach.

4. **Chemistry and mechanism of reactions**: Aldol condensation (including directed aldol condensation), Claisen condensation, Dieckmann, Perkin, Knoevenagel, Witting, Clemmensen, Wolff-Kishner, Cannizzaro and von Richter reactions; Stobble, benzoin and acyloin condensations; Fischer indole synthesis, Skraup synthesis, Bischler-Napieralski, Sandmeyer, Reimer-Tiemann and Reformatsky reactions.

5. **Polymetric Systems**

(a) **Physical chemistry of polymers**: Polymer solutions and their thermodynamic properties; number and weight average molecular weights of polymers. Determination of molecular weights by sedimentation, light scattering, osmotic pressure, viscosity, end group analysis methods.

(b) **Preparation and properties of polymers**: Organic polymers-polyethylene, polystyrene, polyvinyl chloride, Teflon, nylon, terylene, synthetic and natural rubber. Inorganic polymers-phosphonitrilic halides, borazines, silicones and silicates.

(c) **Biopolymers**: Basic bonding in proteins, DNA and RNA.

6. **Synthetic uses of reagents**: OsO₄, HIO₄, CrO₃, Pb(OAc)₄, SeO₂, NBS, B₂H₆, Na-Liquid NH₃, LiA₁H₄ NaBH₄ n-BuLi, MCPBA.

7. **Photochemist**: Photochemical reactions of simple organic compounds, excited and ground states, singlet and triplet states, Norrish-Type I and Type II reactions.

8. **Principles of spectroscopy and applications in structure elucidation**

(a) **Rotational spectra**: diatomic molecules; isotopic substitution and rotational constants.

(b) **Vibrational spectra**: diatomic molecules, linear triatomic molecules, specific frequencies of functional groups in polyatomic molecules.

(c) **Electronic spectra**: singlet and triplet states. N\(\rightarrow\)?* and ?\(\rightarrow\)?* transitions; application to conjugated double bonds and conjugated carbonyls-Woodward-Fieser rules.

(d) **Nuclear magnetic resonance**: Isochronous and anisochronous protons; chemical shift and coupling constants; Application of H1 NMR to simple organic molecules.

(e) **Mass spectra**: Parent peak, base peak, daughter peak, metastable peak, fragmentation of simple organic molecules; ?cleavage, McLafferty rearrangement.

(f) **Electron spin resonance**: Inorganic complexes and free radicals.
Civil Engineering

Civil Engineering – Optional
of Part B – Main Examination of Civil Services Exam

Paper-I

Part-A

Engineering Mechanics:

Units and Dimensions, SI Units, Vectors, Concept of Force, Concept of particle and rigid body. Concurrent, Non Concurrent and parallel forces in a plane, moment of force and Varignon’s theorem, free body diagram, conditions of equilibrium, Principle of virtual work, equivalent force system.

First and second Moment of area, Mass moment of Inertia.

Static Friction, Inclined Plane and bearings.

Kinematics and Kinetics;

Strength of Materials:
Simple Stress and Strain, Elastic constants, axially loaded compression members, Shear force and bending moment, theory of simple bending, Shear Stress distribution across sections, Beams of uniform strength, Leaf spring. Strain Energy in direct stress, bending & shear.

Defleciton of beams: Mecaualy’s method, Mohr’s Moment area method, Conjugate beam method, unit load method. Torsion of Shafts, Transmission of power, close coiled helical springs, Elastic stability of columns, Euler’s Rankine’s and Secant formulae. Principal Stresses and Strains in two dimensions, Mohr’s Circle, Theories of Elastic Failure, Thin and Thick cylinder: Stresses due to internal and external pressure-Lame’s equations.

Structural Analysis:

Casteliano’s theorems I and II, unit load method of consistent deformation applied to beams and pin jointed trusses. Slope-deflection, moment distribution, Kani’s method of analysis and column Analogy method applied to indeterminate beams and rigid frames.’

Rolling loads and Influences lines : Influences lines for Shear Force and Bending moment at a section of beam. Criteria for maximum shear force and bending Moment in beams traversed by a system of moving loads. Influences lines for simply supported plane pin jointed trusses.
Civil Engineering

Arches: Three hinged, two hinged and fixed arches, rib shortening and temperature effects, influence lines in arches.

Plastic Analysis of beams and frames: Theory of plastic bending, plastic analysis, statical method, Mechanism method.

Unsymmetrical bending: Moment of inertia, product of inertia, position of Neutral Axis and Principle axes, calculation of bending stresses.

Part-B

Design of Structures: Steel, Concrete and Masonry Structures.

Structural Steel Design:

Structural Steel: Factors of safety and load factors. Rivetted, bolted and welded joints and connections. Design of tension and compression members, beams of built up section, riveted and welded plate girders, gantry girders, stancheons with battens and lacing, slab and gusseted column bases.

Design of highway and railway bridges: Through and deck type plate girder, Warren girder, Pratt truss.

Design of Concrete and Masonry Structures:

Cantilever and Counterfort type retaining walls.

Water tanks: Design requirements for Rectangular and circular tanks resting on ground.

Prestressed concrete: Methods and systems of prestressing, anchorages, Analysis and design of section for flexure based on working stress, loss of prestress.

Design of brick masonry as per I.S. Codes.

Design of masonry retaining walls.

Part –C

Fluid Mechanics, Open Channel Flow and Hydraulic Machines

Fluid Mechanics: Fluid properties and their role in fluid motion, fluid statics including forces acting on plane and curve-surfaces.
Kinematics and Dynamics of Fluid flow: Velocity and accelerations, stream lines, equation of continuity, irrotational and rotational flow, velocity potential and stream functions, flownet, methods of Civil Engineering

Drawing flownet, sources and sinks, flow separation, free and forced vortices.

Control volume equation, continuity, momentum, energy and moment of momentum equations from control volume equation, Navier-Stokes equation, Euler’s equation of motion, application to fluid flow problems, pipe flow, plane, curved, stationary and moving vanes, sluice gates, weirs, orifice meters and Venturi meters.

**Dimensional Analysis and Similitude:** Buckingham’s Pi-theorem, dimensionless parameters, similitude theory, model laws, undistorted and distorted models.

**Laminar Flow:** Laminar flow between parallel, stationary and moving plates, flow through tube.

**Boundary layer:** Laminar and turbulent boundary layer on a flat plate, laminar sublayer, smooth and rough boundaries, drag and lift.

Turbulent flow through pipes: Characteristics of turbulent flow, velocity distribution and variation of pipe friction factor, hydraulic grade line and total energy line, siphons, expansion and contractions in pipes, pipe networks, water hammer in pipes and surge tanks.

**Open channel flow:** Uniform and non-uniform flows, momentum and energy correction factors, specific energy and specific force, critical depth, resistance equations and variation of roughness coefficient, rapidly varied flow, flow in contractions, flow at sudden drop, hydraulic jump and its applications surges and waves, gradually varied flow, classification of surface profiles, control section, step method of integration of varied flow equation, moving surges and hydraulic bore.

**Hydraulic Machines and Hydropower:**

Centrifugal pumps-Types, characteristics, Net-Positive Suction Height (NPSH), specific speed. Pumps in parallel.

Reciprocating pumps, Airvessels, Hydraulic ram, efficiency parameters, Rotary and positive displacement pumps, diaphragm and jet pumps.

Hydraulic turbines, types classification, Choice of turbines, performance parameters, controls characteristics, specific speed.

**Part-D**

**Geo Technical Engineering**

Types of soil, phase relationships, consistency limits particles size distribution, classifications of soil, structure and clay mineralogy.

Capillary water and structural water, affects trees and pore water pressure, Darcy’s Law, factors affecting permeability, determination of permeability, permeability of stratified soil deposits.

Seepage pressure, quick sand condition, compressibility and consolidation, Terzaghi’s theory of one
Civil Engineering

dimensional consolidation, consolidation test.

Compaction of soil, field control of compaction. Total stress and effective stress parameters, pore pressure coefficients.

Shear strength of soils, Mohr Coulomb failure theory. Shear tests.

Earth pressure at rest, active and passive pressure, Rankine’s theory, Coulomb’s wedge theory, earth pressure on retaining wall, sheetpile walls, Braced excavation.

Bearing capacity, Terzaghi and other important theories, net and gross bearing pressure.

Immediate and consolidation settlement.

Stability of slope, Total Stress and Effective Stress methods, Conventional methods of slices, stability number.

Subsurface exploration, methods of boring, sampling, penetration tests, pressure meter tests.

Essential features of foundation, types of foundation, design criteria, choice of type of foundation, stress distribution in soils, Boussinessq’s theory, Newmark’s chart, pressure bulb, contact pressure, applicability of different bearing capacity theories, evaluation of bearing capacity from field tests, allowable bearing capacity, Settlement analysis, allowable settlement.

Proportioning of footing, isolated and combined footings, rafts, buoyancy rafts, Pile foundation, types of piles, pile capacity, static and dynamic analysis, design of pile groups, pile load test, settlement of piles, lateral capacity. Foundation for Bridges. Ground improvement techniques—preloading, sand drains, stone column, grouting, soil stabilisation.

Paper-II

Part- A

Construction Technology, Equipment, Planning and Management

1. Construction Technology:

Engineering Materials:

Construction:

Civil Engineering

Functional planning of building: Building orientation, circulation, grouping of areas, privacy concept and design of energy efficient building; provisions of National Building Code.

Building estimates and specifications; Cost of works; valuation.

2. Construction Equipment:

Standard and special types of equipment, Preventive maintenance and repair, factors affecting the selection of equipment, economical life, time and motion study, capital and maintenance cost.

Concreting equipment: Weight batcher, mixer, vibration, batching plant, Concrete pump.

Earth-work equipment: Power shovel hoe, bulldozer, dumper, trailers, and tractors, rollers, sheep foot roller.

3. Construction Planning and Management: Construction activity schedules, job layout, bar charts, organization of contracting firms, project control and supervision. Cost reduction measures.

Newwork analysis: CPM and PERT analysis, Float times, cashing of activities, contraction of network for cost optimization, updation, Cost analysis and resource allocation.

Elements of Engineering Economics, methods of appraisal, present worth, annual cost, benefit-cost, incremental analysis. Economy of scale and size. Choosing between alternatives including levels of investments. Project profitability.

Part-B

Survey and Transporting Engineering

Railways: Permanent way, sleepers, rail fastenings, ballast, points and crossings, design of turn outs, stations and yards, turntables, signals, and interlocking, level-crossing. Construction and maintenance of permanent ways: Superelevation, creep of rail, ruling gradient, tract resistance, tractive effort, relaying of track.

Drainage of roads: Surface and sub-surface drainage.

Part-C

Civil Engineering

Hydrology, Water Resources and Engineering:

**Hydrology:** Hydrological cycle, precipitation, evaporation, transpiration, depression storage, infiltration, overland flow, hydrograph, flood frequency analysis, flood estimation, flood routing through a reservoir, channel flow routing-Muskingam method.

**Ground water flow:** Specific yield, storage coefficient, coefficient of permeability, confined and unconfined equifers, aquifers, aquitards, radial flow into a well under confined and unconfined conditions, tubewells, pumping and recuperation tests, ground water potential.

**Water Resources Engineering:** Ground and surface water resource, single and multipurpose projects, storage capacity of reservoirs, reservoir losses, reservoir sedimentation, economics of water resources projects.

**Irrigation Engineering:** Water requirements of crops: consumptive use, quality of water for irrigation, duty and delta, irrigation methods and their efficiencies.

**Canals:** Distribution systems for canal irrigation, canal capacity, canal losses, alignment of main and distributor canal, most efficient section, lined canals, their design, regime theory, critical shear stress, bed load, local and suspended load transport, cost analysis of lined and unlined canals, drainage behind lining.

Water logging: causes and control, drainage system design, salinity.

Canal structures: Design of cross regulators, head regulators, canal falls, aqueducts, matering flumes and canal outlets.

Diversion head work: Principles and design of weirs of permeable and impermeable foundation, Khosla’s theory, energy dissipation, stilling basin, sediment excluders.

Storage works: Types of dams, design, principles of rigid gravity and earth dams, stability analysis, foundation treatment, joints and galleries, control of seepage.

Spillways: Spillway types, crest gates, energy dissipation.

River training: Objectives of river training, methods of river training.

Part-D

Environmental Engineering

**Water Supply:** Estimation of surface and subsurface water resources, predicting demand for water, impurities, of water and their significance, physical, chemical and bacteriological analysis, waterborne diseases, standards for potable water.

**Intake of water:** pumping and gravity schemes. Water treatment: principles of coagulation, flocculation and sedimentation; slow-rapid-pressure-filters; chlorination, softening, removal of taste, odour and salinity.

**Water storage and distribution:** storage and balancing reservoirs: types, location and capacity. Distribution System: layout, hydraulics of pipe lines, pipe fittings, valves including check and pressure.
Civil Engineering

reducing valves, meters, analysis of distribution systems, leak detection, maintenance of distribution systems, pumping stations and their operations.

**Sewerage systems**: Domestic and industrial wastes, storm sewage- separate and combined systems, flow through sewers, design of sewers, sewer appurtenances, manholes, inlets, junctions, siphon. Plumbing in public buildings.

**Sewage characterisation**: BOD, COD, solids, dissolved oxygen, nitrogen and TOC. Standards of disposal in normal water course and on land.

**Sewage treatment**: Working principles, units, chambers, sedimentation tanks, trickling filters, oxidation ponds, activated sludge process, septic tank, disposal of sludge, recycling of waste water.

**Solid waste**: collection and disposal in rural and urban contexts, management of long-term ill-effects.

Accounting, Taxation & Auditing

Financial Accounting

Accounting as a financial information system; Impact of behavioural sciences.

Accounting Standards e.g., accounting for depreciation, inventories, gratuity, research and development costs, long term construction contracts, revenue recognition, fixed assets, contingencies, foreign exchange transactions, investments and government grants.

Advanced problems of company accounts.

Amalgamation absorption and reconstruction of companies.

Valuation of shares and goodwill.

Cost Accounting

Nature and functions of cost accounting.

Job Costing.

Process Costing.

Marginal Costing; Techniques of segregating semi-variable costs into fixed and variable costs.

Cost-volume-profit relationship; aid to decision making including pricing decisions, shutdown etc.

Techniques of cost control and cost reduction.

Budgetary control, flexible budgets.

Standard costing and variance analysis.

Responsibility accounting, investment, profit and Cost centres.

Taxation

Definitions

Basis of charge
Commerce

Incomes which do not form part of total income.

Simple problems of computation of income under various heads, i.e., salaries, income from house property, profits and gains from business or profession, capital gains, income of other persons included in assessee’s total income.

Aggregation of income and set off/carry forward of loss.

Deductions to be made in computing total income.

Auditing

Audit of cash transactions, expenses, incomes, purchases, sales.

Valuation and verification of assets with special reference to fixed assets, stocks and debts.

Verification of liabilities.

Audit of limited companies; appointment, removal, powers, duties and liabilities of company auditor, significance of ‘true and fare’, MAOCARO report.

Auditor’s report and qualification therein.

Special points in the audit of different organisations like clubs, hospitals, colleges, charitable societies.

Part-II

Business Finance and Financial Institutions.

Financial Analysis as a Diagnostic Tool.

Management of Working Capital and its Components-Forecasting working capital needs, inventory, debtors, cash and credit management.

Investment Decisions-Nature and Scope of Capital Budgeting-Various types of decisions including Make or Buy and Lease or Buy-Techniques of Appraisal and their application.

Consideration of Risk and Uncertainty-Analysis of Non-financial Aspects.

Rate of Return on Investments-Required Rate of Return-its measurement-Cost of Capital-Weighted Average Cost-Different Weights.

Concepts of Valuation- Valuation of firm’s Fixed Income Securities and Common Stocks.

Dividend and Retention Policy-Residual Theory or Dividend Policy-Other Models-Actual Practices.

Commerce

Raising finance-short term and long term. Bank finance-norms and conditions.

Financial Distress-Approaching BIFR under Sick Industrial Undertakings Act: Concept of Sickness, Potential Sickness, Cash Loss, Erosion of Network.

Monetary and Credit policy of Reserve Bank of India.

Paper-II

Organisation Theory and Industrial Relations

Part-I

Organisation Theory

Nature and concept of Organisation-Organisation goals; Primary and secondary goals, Single and multiple goals, ends means chain-Displacement, succession, expansion and multiplication of goals-Formal organisation; Type, Structure-Line and Staff, functional matrix, and project- Informal organisation-functions and limitations.

Evolution of organisation theory: Classical, Neo-classical and system approach- Bureaucracy; Nature and basis of power, sources of power, power structure and politics-Organisational behaviour as a dynamic system: technical,social and power systems-interrelations and interactions-Perception-Status system. Theoretical and empirical foundation of theories and Models of motivation. Morale and productivity-Leadership: Theories and styles-Management of conflicts in organisation-Transactional Analysis-Significance of culture to organisations. Limits of rationality-Organisational change, Adaptation, growth and development, Professional management Vs. family management, Organisational control and effectiveness.

Part-II

Industrial Relations.
Nature and scope of industrial relations, the socio-economic set-up, need for positive approach.

Industrial labour in India and its commitment-stages of commitments. Migratory nature- merits and shortcomings.

Theories of Unionism

Trade Union movement in India-origin, growth and structure; Attitude and approach of management of India-recognition. Problems before Indian Trade Union movement.

Industrial disputes-sources;strikes and lockouts.

Compulsory adjudication and collective bargaining-approaches.

89
Commerce

Worker’s participation in management-philosophy, rationale; present day state of affairs and future prospects.

Prevention and settlement of industrial disputes in India.

Industrial relations in Public Enterprises.

Absenteeism and labour turnover in Indian Industries-causes

Relative wages and wage differentials; wage policy.

Wage policy in India; the Bonus issue.

I.L.O. and India;

Role of Personnel Department in the Organisation.
Economics

Economics-Optional
Of Part B-Main Examination of Civil Services Exam

Paper-I

2. Functions of money- Measurement of price level changes-Money and real balances-Monetary standards-High-powered money and the Quantity theory of money, its variants and critiques thereof-Demand for and supply of money-The money multiplier. Theories of determination of interest rate-Interest and prices—Theories of inflation and control of inflation.

5. Public finance and its role in market economy in stabilisation, supply stability, allocative efficiency, distribution and development. Sources of revenue-Forms of Taxes and subsidies, their incidence and effects; Limits to taxation, loans, crowding-out effects and limits to borrowing. Types of budget deficits-Public expenditure and its effects.

6. International Economics

   (i) Old and New theories of International Trade.

   a) Comparative advantage, Terms of trade and offer curve.

   b) Product cycle and Strategic trade theories.

   c) “Trade as an engine of growth” and theories of underdevelopment in an open economy.

   (ii) Forms of protection.

   (iii) Balance of Payments Adjustments Alternative Approaches.

   a) Price versus income, income adjustments under fixed exchange rates.

   b) Theories of policy mix.

   c) Exchange rate adjustments under capital mobility.
d) Floating Rates and their implications for developing countries; Currency Boards.

(iv) (a) IMF and the World Bank.

(b) W.T.O.

(c) Trade Blocks and monetary unions.

7. Growth and development

(i) Theories of growth: Classical and neo-classical theories; The Harrod model; economic development under surplus Labour; wage-goods as a constraint on growth; relative importance of physical and human capitals in growth; innovations and development; Productivity, its growth and source of changes thereof. Factors determining savings to income ratio and the capital-output ratio.

(ii) Main features of growth: Changes in Sectoral compositions of income; Changes in occupational distribution; changes in income distribution; changes in consumption levels and in patterns; changes in savings and investment and in pattern of investment. Case for and against industrialization. Significance of agriculture in developing countries.

(iii) Relation between state, planning and growth, Changing roles of market and plans in growth economic policy and growth.

(iv) Role of foreign capital and technology in growth. The significance of multi-nationals.

(v) Welfare indicators and measures of growth-Human development indices- The basic needs approach.

(vi) Concept of sustainable development; convergence of levels of living of developed and developing countries; meaning of self-reliance in growth and development.

Paper-II

IV. Industry: Industrial system of India: Trends in Composition and growth. Role of public and private sectors, Role of small and cottage industries. Indian Industrial Strategy-Capital versus consumer goods, wage-goods versus luxuries, capital-intensive versus labour-intensive techniques, import-substituting versus export promotion. Sickness and high-cost Industrial policies and their effects. Recent moves for liberalisation and their effects on Indian industry.

V. Money and banking: The monetary institutions of India: Factors determining demand for and supply of money. Sources of Reserve money-money multiplier-Techniques of money supply regulation under open economy. Functioning of money market in India. Budget deficit and money supply. Issues in Reform of Monetary and Banking Systems.

VI. Index numbers of price levels-Course of Price level in post-Independence period-sources and causes of inflation-role of monetary and supply factors in price level determination-policies towards control of inflation. Effects of inflation under open economy.

VII. Trade, balance of payments and exchange: Foreign trade of India; composition and direction shifts in trade policy from import substitution to export promotion. Impact of liberalisation on pattern of trade. India’s external Borrowings-the Debt problem. Exchange rate of the rupee; Devaluations, depreciations and their effects on balance of payments-Gold imports and Gold policy-convertibility on current and capital accounts-rupee in an open economy. Integration of Indian economy with world economy-India and the WTO.

VIII. Public Finance and Fiscal Policy: Characteristics of and trends in India’s Public Finance—Role of Taxes, (direct and indirect) and subsidies-Fiscal and monetary deficits-public expenditures and their significance—Public Finance and Inflation-Limiting Government’s debt-Recent fiscal policies and their effects.

Electrical Engineering

Electrical Engineering-Optional
of Part B – Main Examination of Civil Services Exam

Paper-I

Electrical Circuits – Theory and Applications

Circuit components; network graphs; KCL, KVL; circuit analysis methods: nodal analysis, mesh analysis; basic network theorems and applications; transient analysis: RL, RC and RLC circuits; sinusoidal steady state analysis; resonant circuits and applications; coupled circuits and applications; balanced 3-phase circuits. Two-port networks, driving point and transfer functions; poles and zeros of network functions. Elements of networks synthesis. Filter-theory: design and applications. Active filters. Circuit simulation: Input formats; methods of education formulation; solution of equations; output formats; SPICE.

Signals & Systems

Representation of continuous-time and discrete-time signals & systems; LTI systems; convolution; impulse response; time-domain analysis of LTI systems based on convolution and differential/difference equations. Fourier transform. Laplace transform, Z-transform, Transfer function. Sampling and recovery of signals DFT, FFT Processing of analog signals through discrete-time systems.

E.M. Theory

Analog Electronics

Digital Electronics.

Boolean algebra; minimisation of Boolean functions; logic gates; digital IC families (DTL, TTL, ECL, MOS, CMOS). Combinational circuits: arithmetic circuits, code converters, multiplexers and decoders. Sequential circuits: latches and flip-flops, counters and shift-registers. Comparators, timers, multivibrators. Sample and hold circuits, ADCs and DACs. Semiconductor memories. Logic implementation using programmable devices (ROM, PLA, FPGA).

Energy Conversion

Principles of electromechanical energy conversion: Torque and emf in rotating machines. DC machines: characteristics and performance analysis; starting and speed control of motors.

96
Transformers: principles of operation and analysis; regulation, efficiency; 3-phase transformers. 3-phase induction machines and synchronous machines: characteristics and performance analysis; speed control. Special machines: Stepper motors, brushless dc motors, permanent magnet motors single-phase motors; FHP.

**Power Electronics and Electric Drives:**

Semiconductor power devices: diode, transistor, thyristor, triac, GTO and MOSFET-static characteristics and principles of operation; triggering circuits; phase control rectifiers; bridge converters: fully-controlled and half-controlled; principles of thyristor choppers and inverters; basic concepts of speed control of dc and ac motor drives applications of variable-speed drives.

**Analog Communication**

Random variables: continuous, discrete; probability, probability functions. Statistical averages; probability models; Random signals and noise: white noise, noise equivalent bandwidth; signal transmission with noise; signal to noise ratio. Linear CW modulation: Amplitude modulation: DSB, DSB-SC and SSB. Modulators and Demodulators; Phase and Frequency modulation: PM & FM signals; narrowband FM; generation and detection of FM and PM, Deemphasis, Preemphasis. CW modulation system: Superheterodyne receivers, AM receivers, communication receivers, FM receivers, phase locked loop, SSB receiver Signal to noise ratio calculation for AM and FM receivers.

**Microwaves and Antenna**

Electromagnetic radiation, Propagation of waves: ground waves, sky wave, space wave, tropospheric scatter propagation. Extraterrestrial communications. Antenna: Various types, gain, resistance, bandwidth, bcamwidth and polarization, effect of ground. Antenna coupling; high frequency antennas; microwave antennas; special purpose antennas. Microwave Services: Klystron, magnetron, TWT, gun diodes, Impatt, Bipolar and FETSs, Microwave integrated circuits. Microwave measurements.

**Paper-II**

**Control Systems**

**Electrical Engineering Materials**

Electrical Engineering

**Microprocessors and microcomputers.**

8-bit microprocessor: architecture, CPU, module design, memory interfacing, I/O, Peripheral controllers, Multiprocessing, IBM PC architecture: overview, introduction to DOS, Advanced microprocessors.

**Measurement and Instrumentation**

Error analysis; measurement of current voltage, power, energy, power-factor, resistance, inductance, capacitance and frequency; bridge measurement. Electronic measuring instruments: multimeter, CRO, digital voltmeter, frequency counter, Q-meter, spectrum-analysers, distortion-meter. Transducers: thermocouple, thermistor, LVDT, strain-gauge, piezo-electric crystal. Use of transducers in measurements of non-electrical quantities. Data-acquisition systems.

**IC Technology**

Overview of IC Technology. Unit-steps used in IC fabrication: wafer cleaning, photo-lithography, wet and dry etching, oxidation, diffusion, ion-implantation, CVD and LPCVD techniques for deposition of poly-silicon, silicon, silicon-nitride and silicon di-oxide; metallisation and passivation.

**Power Systems: Analysis and Control**

Steady-state performance of overhead transmission lines and cables; principles of active and reactive power transfer and distribution; per-unit quantities; bus admittance and impedance matrices; load flow; voltage control and power factor correction; economic operation; symmetrical components, analysis of symmetrical and unsymmetrical faults. Concept of system stability: swing curves and equal area criterion. Static VAR system. Basic concepts of HVDC transmission; FACTS. Computer control and Automation: Introduction to energy control centres; various states of a power system; SCADA systems and RTUs. Active power control: Speed control of generators, tie-line control, frequency control. Economic dispatch.

**Power system protection**

**Non-conventional Energy Sources and Energy Management.**

**Digital Communication**

Pulse code modulation (PCM), differential pulse code modulation (DPCM), delta modulation (DM), Digital modulation and demodulation schemes: amplitude, phase and frequency keying schemes (ASK, PSK,

Electrical Engineering

**Satellite Communication, Radar and TV**

Satellite Communication: General overview and technical characteristics, earth station equipment, satellite link design, CNR of Satellite system. Radar: Basic principles, Pulsed systems: CW Doppler radar, FMCW radar, Phase array radars. Television Systems: Television systems and standards, Black and White and Colour-TV transmission and receiver systems.

**Fibre Optic System**

Multiplexing: Time division multiplexing, Frequency Division multiplexing. Optical properties of materials: Refractive index absorption and emission of light, optical fibres, lasers and optoelectronic materials Fibre optic links.
English - Optional
of Part B – Main Examination of Civil Services Exam

Paper-I

Answers must be written in English

Texts for detailed study are listed below. Candidates will also be required to show adequate knowledge of the following topics and movements:

The Renaissance: Elizabethan and Jacobean Drama; Metaphysical Poetry; The Epic and the Mock-epic; Neo-classicism; Satire; The Romantic Movement; The Rise of the Novel; The Victorian Age.

SECTION-A

1. William Shakespeare: King Lear and The Tempest.

2. John Donne. The following poems.
   - Canonisation;
   - Death be not proud;
   - The Good Morrow;
   - On his Mistress going to bed;
   - The Relic;

5. William Wordsworth. The following poems:
   - Ode on Intimations of Immortality;
   - Tintern Abbey.
   - Three years she grew.
   - She dwelt among the untrodden ways.
   - Michael.
   - Resolution and Independence.
   - The World is too much with us.
   - Milton, thou shouldst be living at this hour.
   - Upon Westminster Bridge.
6. Alfred Tennyson : In Memoriam

SECTION-B
6. Thomas Hardy. Tess of the d’Urbervilles.
7. Mark Twain. The Adventures of Huckleberry Finn.

PAPER-II

Answers must be written in English.

Texts for detailed study are listed below. Candidates will also be required to show adequate knowledge of the following topics and movements:

Modernism; Poets of the Thirties; The stream-of-consciousness Novel; Absurd Drama; Colonialism and Post-Colonialism; Indian Writing in English; Marxist, Psychoanalytical and Feminist approaches to literature; Post-Modernism.

SECTION-A
1. William Butler Yeats. The following poems:
   - Easter 1916
   - The Second Coming
   - A Prayer for my daughter.
   - Sailing to Byzantium.
   - The Tower.
   - Among School Children.
   - Leda and the Swan.
   - Meru.
- Lapis Lazuli.
- The Second Coming.
- Byzantium.

2. T.S. Eliot. The following poems:
- The Love Song of J. Alfred Prufrock
- Journey of the Magi.
- Burnt Norton.

3. W.H. Auden. The following poems:
- Partition
- Musée des Beaux Arts.
- In Memory of W.B. Yeats.
- Lay your sleeping head, my love.
- The unknown citizen.
- Consider.
- Mundus Et Infans.
- The Shield of Achilles.
- September 1, 1939.
- Petition.

6. Philip Larkin. The following poems:
- Next.
- Please.
- Deceptions.
- Afternoons.
- Days
- Mr. Bleaney.

7. A.K. Ramanujan. The following poem:
- Looking for a Causim on a Swing.
- A River.
- Of Mothers, among other Things.
- Love Poem for a Wife 1.
- Small-Scale Reflections on a Great House.
- Obituary.

(All these poems are available in the anthology Ten Twentieth Century Indian Poets, edited by R. Parthasarthy, published by Oxford University Press. New Delhi).

**SECTION-B**

1. Joseph Conrad. Lord Jim
4. E.M. Forster. A Passage to India.
I Traditional Songs & Incantations

1. Dakgipa Rabuga
2. Miko Man’a
3. Dani.
4. Sa’rao kritani.
5. Jaragata.
6. Do’sia.
7. Kabe
8. Nokdonggao Ring’ani.
10. Mi Amua.
11. Churugala aro Sa’sat soa.
14. Mi okama.
15. Gongani Kilbolma supea.

II Modern Garo Poetry:

1. Do’kua (T.R. Marak)
2. A’chik Ku’rang (H.D.W. Momin)
3. Sigimim Ripengko Gisik Ra ani (K.R. Marak)
4. Ama (E.R. Marak)
5. Mikjumang A’gilsak (J.D. Shira)
6. Wachimiting (K.G. Momin)
7. Na’an Nitoa (Couplane G. Momin)
8. Ua chakatpilgen (Mackenson Rongmuthu)
9. Isol Nama (D.S. Rongmuthu)
10. Chengoni Manderang (Monengsing R. Sangma)
11. Teng’ajongao (K.M. Momin)
12. Ja’mansa (G.K. Marak)
13. Pring (S.S. Marak)
14. Angni Ma’a (Relish B. Sangma)
15. Tusichprimia (Baren B. Sangma)

Text books –

1. A’chik Aganbwalrang - H.W. Marak
2. Chimonggimin A’Chik Kurang - E.R. Marak
3. A’chik Poedorang - L.D. Shira
Paper – II –

1. Drama - 30 marks.
2. Prose - 20 marks.
3. Fiction - 20 marks.

Text books –

Dikreni Gitcham Poto - Prabod M. Sangma.
Jarambongni Walo - Prabod M. Sangma.
History of Garo Literature - M.S. Sangma.
Physical Geography

i) Geomorphology: Factors controlling landform development; endogenetic and exogenetic forces; origin and evolution of the earth’s crust; physical conditions of the earth’s interior; geosynclines; continental drift; isostasy; sea floor spreading; plate tectonics; mountain building; volcanicity; earthquakes; concepts of geomorphic cycles; landforms associated with fluvial, arid, glacial, coastal and karst cycle; ground water; Applied Geomorphology.

ii) Climatology: Temperature and pressure belts of the world; heat budget of the earth; atmospheric circulation; planetary and local winds; monsoons and jet streams; air masses and fronts; temperate and tropical cyclones; types and distribution of precipitation; Koppen’s and Thornthwaite’s classification of world climate; hydrological cycle; climatic change.

iii) Oceanography: Bottom topography of the Atlantic, Indian and Pacific Oceans; temperature and salinity of the oceans; oceans deposits; ocean currents and tides; marine resources-biotic, mineral and energy resources; coral reefs; sea-level changes.

iv) Biogeography: Genesis of soils; classification and distribution of soils; soil profile; soil erosion and conservation; factors influencing world distribution of plants and animals; problems of deforestation and conservation measures; social forestry, agro-forestry.

v) Environmental Geography: Human ecological adaptations; transformation of nature by man; environmental degradation and conservation; ecosystems and their management; global ecological imbalances-problems of pollution, global warming, reduction in bio-diversity and depletion of forests.

Human Geography

i) Perspectives in Human Geography: A real differentiation; regional synthesis; dichotomy and dualism; environmentalism; quantitative revolution and locational analysis, radical, behavioural, human and welfare approaches; cultural regions of the world human and welfare approaches; cultural regions of the world; human development indicators.

ii) Economic Geography: World economic development-measurement and problems; world resources and their distribution; energy crisis; the limits to growth; world agriculture-typology of agricultural regions; agricultural inputs and productivity; food and nutrition problems; famine-causes; effects and remedies; world industries-location patterns and problems; patterns of world trade.

iii) Population and Settlement Geography: Growth and distribution of world population; demographic attributes; causes and consequences of migration; concepts of over–, under– and optimum population; world population problems.
Geography

Types and patterns of rural settlements; hierarchy of urban settlements; concept of primate city and rank-size rule; functional classification of towns; sphere of urban influence; rural-urban fringe; satellite town; problems of urbanisation.

iv) Regional Planning: Concept of a region; types of regions and methods of regionalisation; growth centres and growth poles; regional imbalances; environmental issues in regional planning; planning for sustainable development.

v) Models, Theories and Laws in Human Geography: System analysis in Human Geography; Malthusian, Marxian and Demographic Transition models; Central Place theories of Christaller and Losch; Von Thunen’s model of agricultural location; Weber’s model of industrial location; Rostov’s model of stages of growth. Heart-land and Rimland theories; laws of international boundaries and frontiers.

Note: Candidates will be required to answer one compulsory map question pertinent to subjects covered by this paper.

Paper-II
Geography of India
Section-A

i) Physical Setting: Space relationship of India with neighbouring countries; structure and relief; drainage system and watersheds; physiographic regions; mechanism of Indian monsoons; tropical cyclones and western disturbances; floods and droughts; climatic regions; natural vegetation, soil types and their distributions.

ii) Resources: Land, surface and groundwater, energy, minerals and biotic resources, their distribution, utilisation and conservation; energy crisis.

iii) Agriculture: Infrastructure-irrigation, seeds, fertilizers, power; institutional factors-land holdings, land tenure and land reforms; agricultural productivity, agricultural intensity, crop combination, land capability; agro and social forestry; green revolution and its socio-economic and ecological implications; significance of dry farming; livestock resources and white revolution; blue revolution; agricultural regionalisation; agro-climatic zones.

iv) Industry: Evolution of industries; locational factors of cotton, jute, iron and steel, fertiliser, paper, drugs and pharmaceutical, automobile and cottage industries; industrial complexes and industrial regionalisation; new industrial policy; multinationals and liberalisation.

v) Transport, Communication and Trade: Road, railway, waterway, airway and pipeline networks and their complementary roles in regional development; growing importance of ports on national and foreign trade, trade balance; free trade and export promotion zones; developments in communication technology and its impact on economy and society.
Geography

Section-B

i) **Cultural Setting**: Racial and ethnic diversities; major tribes, tribal areas and their problems; role of language, religion and tradition in the formation of cultural regions; growth, distribution and density of population; demographic attributes-sex-ratio, age structure, literacy rate, work-force, dependency ratio and longevity; migration (inter-regional, intra-regional and international) and associated problems, population problems and policies.

ii) **Settlements**: Types, patterns and morphology of rural settlements; urban development; census definition of urban areas; morphology of Indian cities; functional classification of Indian cities; conurbations and metropolitan regions; urban sprawl; slums and associated problems; town planning; problems of urbanisation.

iii) **Regional Development and Planning**: Experience of regional planning in India; Five Year Plans; integrated rural development programmes; panchayati raj and decentralised planning; command area development; watershed management; planning for backward area, desert drought-prone, hill and tribal area development; multi-level planning; geography and regional planning.

iv) **Political Aspects**: Geographical basis of Indian federalism; state reorganisation; regional consciousness and national integration; international boundary of India and related issues; disputes on sharing of water resources; India and geopolitics of the Indian Ocean.

v) **Contemporary Issues**: Environmental hazards—landslides, earthquakes, floods and droughts, epidemics; issues related to environmental pollution; changes in patterns of land use; principles of environmental impact assessment and environmental management; population explosion and food security; environmental degradation; problems of agrarian and industrial unrest; regional disparities in economic development; concept of sustainable growth and development.

**Note**: Candidates will be required to answer one compulsory map question pertinent to subjects covered by this paper.
Geology - Optional
of Part B – Main Examination of Civil Services Exam

Paper-I
Section-A

(i) General Geology

(ii) Geomorphology and Remote Sensing

(iii) Structural geology

Section-B

(iv) Paleaontology

Geology

(v) Stratigraphy and Geology of India

(vi) Hydrogeology and Engineering Geology:

Paper-II
Section-A

(i) Mineralogy

Classification of crystals into systems and classes of symmetry. International system of crystallographic notation. Use of projection diagrams to represent crystal symmetry. Crystal defects. Elements of X-ray crystallography.

Petrological microscope and accessories. Optical properties of common rock forming minerals. Pleochroism, extinction angle, double refraction, birefringence, twinning and dispersion in minerals.

(ii) Igneous and Metamorphic Petrology.

Geology

(ii) Sedimentology.

Section-B

(iv) Economic Geology

(v) Mining Geology

(vi) Geochemistry and Environmental Geology.

Natural hazards-floods, landslides, coastal erosion, earthquakes and volcanic activity and mitigation. Environmental impact of urbanisation, open cast mining, industrial and radioactive waste disposal, use of fertilizers, dumping of mine waste and fly-ash. Pollution of ground and surface water, marine pollution Environment protection-legislative measures in India.
1. History of Hindi Language and Nagari Lipi.
   I. Grammatical and applied forms of Apbhransh, Awahatta & Arambhik Hindi.
   II. Development of Braj and Awadhi as literary language during medieval period.
   III. Early form of Khari-boli in Siddha-Nath Sahitya, Khusero, Sant Sahitaya, Rahim etc. and Dakhni Hindi.
   IV. Development of Khari-boli and Nagari Lipi during 19th Century.
   V. Standardisation of Hindi Bhasha & Nagari Lipi.
   VI. Development of Hindi as national Language during freedom movement.
   VII. The development of Hindi as a National Language of Union of India.
   VIII. Scientific & Technical development of Hindi Language.
   IX. Prominent dialects of Hindi and their inter relationship.
   X. Salient features of Nagari Lipi and the efforts for its reform and Standard form of Hindi.
   XI. Grammatical structure of Standard Hindi.

2. History of Hindi Literature
   I. The relevance and importance of Hindi literature and tradition of writing History of Hindi Literature.
   II. Literacy trends of the following four periods of history of Hindi Literature.

   A: Adikal-Sidh, Nath and Raso Sahitya.
   Prominent poets-Chandvardai, Khusaro, Hemchandra, Vidyapati.
   B: Bhaktikal-Sant Kavyadhara, Sufi Kavyadhara, Krishna Bhaktidhara and Ram Bhaktidhara.
   Prominent Poets-Kabir, Jayasi, Sur & Tulsi.
Hindi

C : Ritikal-Ritikavya, Ritibaddhakavya & Riti Mukta Kavya.

Promoninent Poets-Keshav, Bihari, Padmakar and Ghananand.

D : Adhunik Kal

a. Renaissance, the development of Prose, Bharatendu Mandal.

Prominent Poets : Maithili Sharan Gupta, Prasad, Nirala, Mahadevi, Dinkar, Agyeya, Muktibodh, Nagarjun.

III. Katha Sahitya

A. Upanyas & Realism.

B. The Origin and development of Hindi Novels.

C. Prominent Novelists : Premchand, Jainendra, Yashpal, Renu and Bhism Sahani.

D. The origin and development of Hindi short story.

E. Prominent short Story Writers : Premchand, Prasad, Agyaya, Mohan Rakesh & Krishna Shobti.

IV. Drama & Theatre.

A. The origin and development of Hindi Drama.

B. Prominent Dramatists : Bharatendu, Prasad, Jagdish Chandra Mathur, Ram Kumar Verma, Mohan Rakesh.

C. The development of Hindi Theatre.

V. Criticism

A. The origin and development of Hindi criticism : Saiddhatik, Vyavharik, Pragativadi, Manovishleshvadi & Nai Alochana.

B. Prominent critics : Ramchandra Shukla, Hajari Prasad Dwivedi, Ram Vilas Sharma & Nagendra.

VI. The other forms of Hindi prose-Lalit Nibandh, Rekhachitra, Sansmaran, Yatra-vrirrta.
This paper will require first hand reading of prescribed texts and will test the critical ability of the candidates.

Section-A

1. Kabir : Kabir Granthawali, Ed; Shyam Sundar Das (First hundred Sakhis).
3. Tulsidas : Ramchrit Manas (Sundar Kand) Kavitawali (Uttar Kand).
5. Bihari : Bihari Ratnakar, Ed. Jagannath Prasad Ratnakar (First 100 Dohas)
7. Prasad : Kamayani (Chinta and Sharddha Sarg).
10. Agyeya : Angan Ke Par Dwar (Asadhya Vina)

Section-B

2. Mohan Rakesh : Ashad Ka Ek Din
3. Ramchandra Shukla : Chintamani (Part I)
   (Kavita Kya Hai] Shraddha Aur Bhakti)
7. Yashpal : Divya
8. Phaniswar Nath Renu : Maila Anchal
10. Rajendra Yadav : Ek Dunia Samanantar (All Stories)
History - Optional
of Part B – Main Examination of Civil Services Exam

**Paper-I**
*Section-A*

1. Sources and approaches to study of early Indian history.
2. Early pastoral and agricultural communities. The archaeological evidence.
3. The Indus Civilisation: its origins, nature and decline.
4. Patterns of settlement, economy, social organisation and religion in India (c. 2000 to 500 B.C.): archaeological perspectives.
5. Evolution of North Indian Society and culture: evidence of Vedic texts (Samhitas to Sutras)
10-11 India in the Gupta and post-Gupta period (to c. 750): Political history of northern and peninsular India; Samanta system and changes in political structure; economy; social structure; culture; religion.
12. Themes in early Indian cultural history: languages and texts; major stages in the evolution of art and architecture; major philosophical thinkers and schools; ideas in science and mathematics.

**Section-B**

History

1. Establishment of British rule in India: Factors behind British success Indian powers-Mysore, Maratha Confederacy and the Punjab as major powers in resistance; policy of subsidiary Alliance and Doctrine of Lapse.

2. Colonial Economy: Tribute system. Drain of wealth and “deindustrailisation”. Fiscal pressures and revenue settlements (Zamindari, Ryotwari and Mahalwari settlements); Structure of the British raj up to 1857 (including the Acts of 1773 and 1784 and administrative organisation).

3. Resistance to colonial rule: Early uprisings; Causes, nature and impact of the Revolt of 1857; Reorganisation of the Raj, 1858 and after.

4. Socio-cultural impact of colonial rule: Official social reform measures (1828-57); Orientalist-Anglicist controversy; coming of English education and the press; Christian missionary activities; Bengal Renaissance; Social and religious reform movements in Bengal and other areas; Women as focus of social reform.

5. Economy 1858-1914: Railways; Commercialisation of Indian agriculture; Growth of landless labourers and rural indebtedness; Famines; India as market for British industry; Customs removal, exchange and countervailing excise; Limited growth of modern industry.

6. Early Indian Nationalism: Social background; Formation of national associations; Peasant and tribal uprising during the early nationalist era; Foundation of the Indian National Congress; The Moderate phase of the Congress; Growth of Extremism; The Indian Council Act of 1909; Home Rule Movement; The Government of India Act of 1919.

7. Inter-War economy of India: Industries and problem of Protection; Agricultural distress; the great Depression; Ottawa agreements and Discriminatory Protection; the growth of trade unions; The Kisan Movement; The economic programme of the Congress Karachi resolution, 1931.

8. Nationalism under Gandhi’s leadership: Gandhi’s career, thought and methods of mass mobilisation; Rowlatt Satyagraha, Khalifat-Non-Cooperation Movement, Civil Disobedience Movement, 1940 Satyagraha and Quit India Movement; State People’s Movement.

9. Other strands of the National Movement:

   (a) Revolutionary movements since 1905; (b) Constitutional politics; Swarajists, Liberals, Responsive Cooperation; (c) Ideas of Jawaharlal Nehru, (d) The Left (Socialists and Communists); (e) Subhas Chandra Bose and the Indian National Army; (f) Communal strands: Muslim League and Hindu Mahasabha; (g) Women in the National Movement.

10. Literacy and cultural movements: Tagore, Premchand, Subramanyam Bharati, Iqbal as examples only; New trends in art; Film industry; Writers’ Organisations and Theatre Associations.

118
History

12. First phase of Independence (1947-64): Facing the consequences of Partition; Gandhiji’s murder; economic dislocation; Integration of States; The democratic constitution, 1950; Agrarian reforms; Building an industrial welfare state; Planning and industrialisation; Foreign policy of Non-alignment; Relations with neighbour.

Section-B

13. Enlightenment and Modern ideas.

1. Renaissance Background.

14. Origins of Modern Politics

1. European States System.

3. French revolution and after math, 1789-1815.

4. British Democratic Politics, 1815-1850; Parliamentary Reformers, Free Traders, chartists.

15. Industrialisation

2. Industrialisation in other countries: USA, Germany, Russia, Japan.

1. Rise of Nationalism in 19th century.

2. Nationalism : state-building in Germany and Italy.

3. Disintegration of Empires through the emergence of nationalities.

17. Imperialism and Colonialism

History

2. Types of Empire: of settlement and non-settlement: Latin America, South Africa, Indonesia, Australia.

18. Revolution and Counter-Revolution
   1. 19th Century European revolutions.
   2. The Russian Revolution of 1917-1921.
   3. Fascist Counter-Revolution, Italy and Germany.

19. World Wars
   1. 1st and 2nd World Wars as Total Wars: Societal Implications
   2. World War I: Causes and Consequences.
   3. World War II: Political Consequences.

20. Cold War
   1. Emergence of Two Blocs.
   2. Integration of West Europe and US Strategy; Communist East Europe.
   3. Emergence of Third World and Non-Alignment.
   4. UN and Dispute Resolution.

21. Colonial Liberation
   1. Latin America-Bolivar.
   2. Arab World-Egypt.
   3. Africa-Apartheid to Democracy.

22. Decolonization and Underdevelopment.
   2. Factors constraining Development: Latin America, Africa.
History

23. **Unification of Europe**
   1. Post War Foundations: NATO and European Community.
   2. Consolidation and Expansion of European Community/European Union.

24. **Soviety Disintegration and the Unipolar World.**
Khasi - Optional
of Part B – Main Examination of Civil Services Exam

Paper-I

(a) Khasi Poetry:
1. Soso Tham : Ki Sngi Barim U Hynniew Trep (Section II to VI)
3. Jerome Diengdoh : Synjaw Ummat (Part II: I-VIII)

(b) Khasi Drama:
1. Mondon Bareh : U Mihsngi
3. A. Jala : Haba Ka Kupar Jot Ka Dawa.

(c) Khasi Fiction:
1. S.J. Duncan : “U Men Mali”. “Ki Mad ia ka Shillong” and “Ka Akor Kaba Tam” from Phuit ka Sabuit bad kiwei kiwei de ki Khana.
2. W Tiewsoh : Kam Kalbut

Paper-II

(a) Khasi Culture:
2. D.T. Laloo : Ka Ksaw ka Kpong u Hynniew Trep (Chapters I & II)

(b) Khasi Literary Criticism:
1. H. Elias : Ka Hamsaia Ki Por (Chapter I, II, III and IV)
2. J.S. Shanpliang : Ki Snap Ka Novel.

(c) Khasi Linguistics:
1. H.W. Sten : Shaphang ka Ktien (Excluding pages 55 to 68 dealing with bars).
2. M.B. Jyrwa : Ki Jingpule shaphang ka Ktien (Chapter II, V and VI)
Constitutional Law of India

2. Fundamental Rights.
4. Constitutional Position of the President and relation with the Council of Ministers.
5. Governor and his Powers.
6. Appointment and Transfer of Judges of the Supreme Court and the High Courts.
7. Supreme Court and High Courts: Powers and Jurisdiction.
9. Distribution of Legislative Powers between the Union and the States.
10. Administrative Relationship between Union and the States.

Section-B

International Law

1. Nature and Definition of International Law.
2. Relationship between International Law and Municipal Law.

4. Sea: Inland Waters, Territorial Sea, Contiguous Zone, Continental Shelf, Exclusive Economic Zone and High Seas

5. Individuuls, nationality, statelessness; Human Rights and procedures available for their enforcement.

6. Territorial jurisdiction of States, Extradition and Asylum.

7. Treaties: Formation application, termination and reservation.

11. Legality of the use of nuclear weapons; ban on testing of nuclear weapons; Nuclear non proliferation treaty, CTBT.

**Paper-II**

**Section-A**

**Law of Crimes:**

1. General Principles of Criminal Liability: mens rea and actus reus, Mens rea in statutory offences.

4. Preparations and criminal attempts.

5. General exceptions.

7. Abetment.
8. Criminal conspiracy.
9. Offences against the State.
10. Offences against public tranquillity.
11. Offences against human body.
12. Offences against property.

**Law of Torts:**

2. Liability based upon fault and strict liability.
3. Vicarious liability including State Liability.
5. Joint tortfeasors.
6. Remedies.
8. Defamation.
11. False imprisonment.
12. Malicious Prosecution.
Law

Section-B

Law of Contracts and Mereantile Law :-

1. Formation of Contract.
2. Factors vitiating consent.
3. Void voidable, illegal and unenforceable agreements.
4. Performance and discharge of contracts.
5. Quasi-contracts.
6. Consequences of breach of contract.
8. Sale of goods and hire purchase.
Management - Optional

of Part B – Main Examination of Civil Services Exam

Paper-I

The candidate should make a study of the concept and development of management as science and art drawing upon the contributions of leading thinkers of management and apply the concepts to the real life of government and business decision making keeping in view the changes in the strategic and operative environment.

Section-A

Section-B

Management

Paper-II

Section-A

Section-B

128
Mathematics

Mathematics - Optional
of Part B – Main Examination of Civil Services Exam

Paper-I

Section-A

Linear Algebra

Vector, space, linear dependence and independence, subspaces, bases, dimensions, Finite dimensional vector spaces.

Matrices, Cayley-Hamilton theorem, eigenvalues and eigenvectors, matrix of linear transformation, row and column reduction, Echelon form, equivalence, congruences and similarity, reduction to canonical form, rank, orthogonal, symmetrical, skew symmetrical, unitary, hermitian, skew-hermitian forms-their eigenvalues. Orthogonal and unitary reduction of quadratic and hermitian forms, positive definite quadratic forms.

Calculus

Real numbers, limits, continuity, differentiability, mean-value theorems, Taylor’s theorem with remainders, indeterminate forms, maximas and minima, asymptotes. Functions of several variables: continuity, differentiability, partial derivatives, maxima and minima. Lagrange’s method of multipliers, Jacobian. Riemann’s definition of definite integrals, indefinite integrals, infinite and improper integrals, beta and gamma functions. Double and triple integrals (evaluation techniques only). Areas, surface and volumes, centre of gravity.

Analytic Geometry :

Cartesian and polar coordinates in two and three dimensions, second degree equations in two and three dimensions, reduction to canonical forms, straight lines, shortest distance between two skew lines, plane, sphere, cone, cylinder, paraboloid, ellipsoid, hyperboloid of one and two sheets and their properties.

Section-B

Ordinary Differential Equations :-

Formulation of differential equations, order and degree, equations of first order and first degree, integrating factor, equations of first order but not of first degree, Clariaut’s equation, singular solution.

Higher order linear equations, with constant coefficients, complementary function and particular integral, general solution, Euler-Cauchy equation.

Second order linear equations with variable coefficients, determination of complete solution when one solution is known, method of variation of parameters.
Mathematics

Dynamics, Statics and Hydrostatics:

Degree of freedom and constraints, rectilinear motion, simple harmonic motion, motion in a plane, projectiles, constrained motion, work and energy, conservation of energy, motion under impulsive forces, Kepler’s laws, orbits under central forces, motion of varying mass, motion under resistance.

Equilibrium of a system of particles, work and potential energy, friction, common catenary, principle of virtual work, stability of equilibrium, equilibrium of forces in three dimensions.

Pressure of heavy fluids, equilibrium of fluids under given system of forces Bernoulli’s equation, centre of pressure, thrust on curved surfaces, equilibrium of floating bodies, stability of equilibrium, metacentre, pressure of gases.

Vector Analysis:

Scalar and vector fields, triple, products, differentiation of vector function of a scalar variable, Gradient, divergence and curl in Cartesian, cylindrical and spherical coordinates and their physical interpretations. Higher order derivatives, vector identities and vector equations.

Application to Geometry: Curves in space, curvature and torision. Serret-Frenet’s formulae, Gauss and Stokes’ theorems, Green’s identities.

Paper-II

Section-A

Algebra

Groups, subgroups, normal subgroups, homomorphism of groups quotients groups basic isomorphism theorems, Sylow’s group, permutation groups, Cayley theorem. Rings and ideals, principal ideal domains, unique factorization domains and Euclidean domains. Field extensions, finite fields.

Real Analysis

Real number system, ordered sets, bounds, ordered field, real number system as an ordered field with least upper bound property, Cauchy sequence, completeness. Continuity and uniform continuity of functions, properties of continuous functions on compact sets. Riemann integral, improper integrals, absolute and conditional convergence of series of real and complex terms, rearrangement of series. Uniform convergence, continuity, differentiability and integrability for sequences and series of functions. Differentiation of functions of several variables, change in the order of partial derivatives, implicit function theorem, maxima and minima. Multiple integrals.

Linear Programming:

Linear programming problems, basic solution, basic feasible solution and optimal solution, graphical method and Simplex method of solutions. Duality.

Transportation and assignment problems. Travelling salesman problems.
Section-B

Partial differential equations:

Curves and surfaces in three dimensions, formulation of partial differential equations, solutions of equations of type \( \frac{dx}{p} = \frac{dy}{q} = \frac{dz}{r} \); orthogonal trajectories, pfaffian differential equations; partial differential equations of the first order, solution by Cauchy’s method of characteristics; Charpit’s method of solutions, linear partial differential equations of the second order with constant coefficients, equations of vibrating string, heat equation, Laplace equation.

Numerical Analysis and Computer programming:

Numerical methods: Solution of algebraic and transcendental equations of one variable by bisection Regula-Falsi and Newton-Raphson methods, solution of system of linear equations by Gaussian elimination and Gauss-Jordan (direct) methods, Gauss-Seidel (iterative) method. Newton’s (forward and backward) and Lagrange’s method of interpolation.

Numerical integration: Simpson’s one-third rule, trapezodial rule, Gaussian quadrature formula.

Representation of unsigned integers, signed integers and reals, double precision reals and long integers.

Algorithms and flow charts for solving numerical analysis problems.

Developing simple programs in Basic for problems involving techniques covered in the numerical analysis.

Mechanics and Fluid Dynamics:

Generalised coordinates, constraints, holonomic and non-holonomic systems, D’Alembert’s principle and Lagrange’s equations, Hamilton equations, moment of inertia, motion of rigid bodies in two dimensions.

Equation of continuity, Euler’s equation of motion for inviscid flow, stream-lines, path of a particle, potential flow, two-dimensional and axisymmetric motion, sources and sinks, vortex motion, flow past a cylinder and a sphere, method of images. Navier-Stokes equation for a viscous fluid.
1. **Theory of Machines**

Kinematic and dynamic analysis of planar mechanisms. Cams, Gears and gear trains, Flywheels, Governors, Balancing of rigid rotors, Balancing of single and multicylinder engines, Linear vibration analysis of mechanical systems (single degree and two degrees of freedom), Critical speeds and whirling of shafts, Automatic Controls, Belts and chain drives. Hydrodynamic bearings.

2. **Mechanics of Solids**

Stress and strain in two dimensions. Principal stresses and strains, Mohr’s construction, linear elastic materials, isotropy and an isotropy, Stress-strain relations, Unilaxial loading, thermal stresses. Beams: Banding moment and shear force diagrams, bending stresses and deflection of beams, Shear stress distribution. Torsion of shafts, helical springs. Combined stresses, Thick and thin walled pressure vessels. Struts and columns, Strain energy concepts and theories of failure. Rotating discs. Shrink fits.

3. **Engineering Materials**

4. **Manufacturing Science**

5. **Manufacturing management**

Production Planning and Control, Forecasting-Moving average, exponential smoothing, Operations scheduling; assembly line balancing. Product development. Breakeven analysis, Capacity planning. PERT and CPM.

Value Engineering: Value analysis, for cost/value. Total quality management and forecasting techniques project management.

6. **Elements of Computation**

1. **Thermodynamics:**

Basic concept. Open and closed systems, Applications of Thermodynamic Laws, Gas equations, Clapeyron equation, Availability, Irreversibility and Tds relations.

2. **I.C. Engines, Fuels and Combustion:**

Spark ignition and compression ignition engines, Four stroke engine and Two stroke engines, mechanical, thermal and volumetric efficiency, Heat balance.

3. **Heat transfer, refrigeration and air conditioning:**

4. **Turbo – Machines and Power Plants:**

Continuity, Momentum and Energy Equations. Adiabatic and Isentropic flow, fanno lines, Rayleigh lines. Theory and design of axial flow turbines and compressors, Flow through turbo-machine blade, cascades, centrifugal compressor. Dimensional analysis and modelling. Selection of site for stream, hydro, nuclear and stand-by power plants. Selection base and peak load power plants, Modern High pressure, High duty boilers, Draft and dust removal equipment, Fuel and cooling water systems, heat balance, station and plant heat rates, operation and maintenance of various power plants, preventive maintenance, economics of power generation.
Medical Science

Medical Science - Optional
of Part B – Main Examination of Civil Services Exam

Paper-I

Section-A

I. Human Anatomy : Gross and microscopic anatomy and movements of shoulder, hip and knee joints; Blood supply, nerve innervation of hand, Lymphatic system; Karyotyping, medical genetics; Electron microscopic structure of glomerulous and muscle; Gross and microscopic anatomy and blood supply of lungs, heart, kidneys, liver, testis and uterus; Gross anatomy of pelvis, perineum and inguinal region. Gross-sectional anatomy of the body and mid-thoracic, upper abdominal, mid-abdominal and pelvic regions.

Embryology : Major steps in the development of lung, heart, kidney, urinary bladder, uterus, ovary, testis and their common congenital abnormalities; Placenta and placental barrier.

Anatomy of central and peripheral autonomic nervous system :

Neural pathways for cutaneous sensations and vision; Cranial nerves, distribution and clinical significance; Anatomy of autonomic control of gastrointestinal, respiratory and reproductive systems.

II. Human Physiology : Central, peripheral and autonomic nervous system; Nerve and muscle excitation, conduction and transmission of impulse, mechanism of contraction, neurovascular transmission, EMG; Synaptic transmission, reflexes, control of equilibrium, posture and muscle tone descending pathways, functions of cerebellum, basal ganglia, reticular formation, hypothalamus limbic system and cerebral cortex; Physiology of sleep and consciousness, EEG; Higher functions of the brain; Vision and hearing.

Endocrine system : Mechanism of action of hormones, formation, secretion, transport, metabolism, functions and regulations of secretion of pancreas and pituitary glands.

Physiology of reproductive system : menstrual cycle, lactation, pregnancy.

Blood : Development, regulations and fate of blood cells.

Cardio-vascular, respiratory gastro-intestinal and renal physiology : Cardiac excitation, spread of cardiac impulse, ECG, cardiac output, blood pressure, regulation of cardiovascular functions; Mechanics of respiration and regulation of respiration; Digestion and absorption of food, regulation of secretion and motility of gastrointestinal tract; Glomerular and tubular functions of kidney.

III. Biochemistry : pH and pK Henderson-Hassebalch Equation; Properties and regulation of enzyme activity, role of high energy phosphates in bioenergetics; Sources, daily requirements, action and toxicity of vitamins; Metabolism of lipids, carbohydrates, proteins, disorders of their metabolism; Chemical nature, structure, synthesis and functions of nucleic acids and proteins; Distribution and regulation of body water and minerals including trace elements; Blood Gas Analysis, GTT, Immuno electrophorises molecular structure of muscle contractile protein, oestrogen receptors.
Section-B

I. Pathology: Reaction of cell and tissue of injury, inflammation and repair, disturbances of growth and cancer, genetic diseases; pathogenesis and histopathology of Rheumatic and ischaemic heart disease; Bronchogenic carcinoma, carcinoma breast, oral cancer, cancer colon. Lymphoma, leukaemia, liver cancer, meningioma and meningitis; Etiology, pathogenesis and histopathology of peptic ulcer, cirrhosis liver glomerulonephritis, lobar pneumonia, acute osteomyelitis, hepatitis, acute pancreatitis.

II. Microbiology: Growth of micro-organisms, sterilization and disinfection, bacterial genetics, virus-cell interactions; Immunological principles, acquired immunity, immunity in infections cause by viruses; Diseases caused by and laboratory diagnosis of Staphylococcus, enterococcus, salmonella, shigella, secheichiza, pseudomonos, vibrio, adenoviruses, herpes viruses (including rubella, fungi, protozoa, helminths, leptosiral infection).

IV. Forensic Medicine and Toxicology: Forensic examination of injuries and wounds; Physical and chemical examination of blood and seminal stains; Organo phosphorous poisoning, sedative overdose, hanging, drowning, burns, snake envenomation.

Paper-II

Section-A

I. General Medicine:

Etiology, clinical features, diagnosis and principles of management (including prevention) of:-

Malaria, Typhoid, Cholera, Tetanus, Rabies, Exanthematous Fevers, Tuberculosis, AIDS.

Etiology, clinical features, diagnosis and principles of management of:

Rheumatic, ischaemic and congenital heart disease, hypertension. Cardiomyopathy, pulmonary embolism.

Acute and chronic respiratory infections, bronchial asthma.

Occupational lung disease, pleural effusion, disseminated tuberculosis Malabsorption syndromes, acid peptic diseases, haematemesis, Viral hepatitis, cirrhosis of liver, alcoholic liver disease.

Acute glomerulonephritis, chronic pyelonephritis, renal failure, nephrotic syndrome, renovascular, hypertension, diabetis mellitus, anaemia, coagulation disorders, leukaemia, polycythemia and hyperviscocity syndrome, meningitis encephalitis, cerebrovascular diseases.
Medical Science

Role of Imageology in the work-up of medical problems, ultrasound, echo cardiogram, CT Scan MRI.

Psychiatry: Common psychiatric disorders, schizophrenia, ECT, lithium.

Section-B

I. General Surgery:

Clinical features, causes diagnosis and principles of management of:

Cervical lymph node enlargement, parotid tumour, oral cancer, cleft palate, hare lip.

Laryngeal tumour, esophageal tumours.

Peripheral arterial diseases, varicose veins, coarctation of aorta.

Dysfunctions of thyroid parathyroids and adrenals.

Tumours of Thyroid, Parathyroid, Adrenal, Pituitary Glands.

Abscess of breast, cancer breast, fibroadenoma and adenosis.

Acute and chronic appendicitis, bleeding peptic ulcer, tuberculosis of bowel, intestinal obstruction, ulcerative colitis.

Renal mass, acute retention of urine, benign prostatic hypertrophy.

Haemothorax, constrictive pericarditis.

Splenomegaly, chronic cholezystitis, portal hypertension, liver abscess, peritonitis, carcinoma head of pancreas.

Direct and indirect inguinal hernias and their compilations.

Fractures of femur and spine, Colles’ fracture and bone tumours.

Organis transplantation, kidney, liver, heart, bone-marrow.

Laprascopic Surgery.
Medical Science

II. Obstetrics and gynaecology including Family Planning.

Diagnosis of pregnancy, screening of high risk pregnancy, foetoplacental development.

Labour management, complications of 3rd stage, postpartum haemorrhage, resuscitation of the new born.

Diagnosis and management of anaemia and pregnancy induced hypertension.

Principles of the following contraceptive methods.

Intra-uterine devices, pills, tubectomy and vasectomy. Medical termination of pregnancy including legal aspects.

Etiology, clinical features, diagnosis and principles of management of : Cancer cervic.

Leucorrhoea, pelvic pain, infertility, abnormal uterine bleeding, amenorrhoea.

III. Preventive and Social Medicine.

Concept of causation and control of disease in the community, principles and methods of epidemiology.

Health hazards due to environmental pollution and industrialisation.

Normal nutrition and nutritional deficiency diseases in India.

Population trends (World and India),

Growth of population and its effect on health and development.

Objectives, components and critical analysis of each of the following National programmes for the control/eradication of :

Malaria, filarial, kala-azar, leprosy, tuberculosis, cancer, blindness, iodine deficiency disease, AIDS & STD and guinea worm.

Objectives, components critical analysis of each of the following National Health and Family Welfare Programmes :

Maternal and Child Health

Family Welfare

Nutrition.

Immunization.
History and Problems of Philosophy

Section-A

3. Descartes: Cartesian Method and certain knowledge, God, Mind-Body Dualism.
4. Spinoza: Substance, Attributes and Modes, Pantheism; Bondage and Freefom.
5. Leibnitz: Monads; Theory of Perception of God.
9. Kant: Distinctions between synthetic and analytic judgements and between aprion and aposteriori judgements, Space, Time Categories, Possibility of Synthetic Apriori Judgements, Ideas of Reason and Antinomics; Criticism of the Proofs for the Existence of God.
12. Logical Atomism: Atomic Facts, Atomic sentences, Logical Constructions and Incomplete Symbols (Russell), Distinction of saying and showing (Wittgenstein)
15. Existentialism: Kierkegaard, Sartre.
16. Quine: Radical empiricism.
Philosophy

Section-B

7. Vedanta : Schools of Vedanta Sankara, Ramanuja, Madhav (Brahman, Isvara, Atman, Jiva, Jagat, Maya, Avidya Adhyasa, Moksa).

Paper-II

Section-A

Socio-Political Philosophy

2. Sovereignty (Austin, Boidin, Laski, Kautilya).
3. Individual and State.
4. Democracy; Concept and forms.
5. Socialism and Marxism.
6. Humanism.
7. Secularism.
8. Theories of punishment.
9. Co-existence and violence; Sarvoday.
Section-B

Philosophy of Religion.

3. Immortality of Soul.
4. Liberation.
5. Problem of Evil.
7. Religion without God.
8. Religion and Morality.
Physics - Optional
of Part B – Main Examination of Civil Services Exam

Paper-I

Section-A

1. Classical Mechanics

(a) Particle dynamics

Centre of mass and laboratory coordinates, conservation of linear and angular momentum. The rock equation. Rutherford scattering, Galilean transformation, inertial and non-inertial frames, rotator frames, centrifugal and Coriolis forces, Foucault pendulum.

(b) System of particles

Constraints, degrees of freedom, generalised coordinates and momenta. Lagrange’s equation and applications to linear harmonic oscillator, simple pendulum and central force problems. Cycle coordinates, Hamiltonian Lagrange’s equation from Hamilton’s principle.

(c) Rigid body dynamics

Eulerian angles, inertia tensor, principal moments of inertia. Euler’s equation of motion of a rigid body force-free motion of a rigid body. Gyroscope.

2. Special Relativity, Waves & Geometrical Optics

(a) Special Relativity

Michelson-Morley experiment and its implications. Lorentz transformations-length contraction, time dilation, addition of velocities, aberration and Doppler effect, mass-energy relation, simple application to a decay process. Minkowski diagram, four dimensional momentum vector. Covariance of equations on physics.

(b) Waves

(c) Geometrical Optics

Laws of reflection and refraction from Fermat’s principle. Matrix method in paraxial optic-thin length formula, nodal planes, system of two thin lenses, chromatic and spherical aberrations.
3. Physical Optics

(a) Interference

Interference of light—Young’s experiment, Newton’s rings, interference by thin films, Michelson interferometer. Multiple beam interference and Fabry-Perot interferometer. Holography and simple applications.

(b) Diffraction.

Fraunhofer diffraction—single slit, double slit, diffraction grating, resolving power. Fresnel diffraction :- half-period zones and zones plates. Fresnel integrals. Application of Cornu’s spiral to the analysis of diffraction at a straight edge and by a long narrow slit. Diffraction by a circular aperture and the Airy pattern.

(c) Polarisation and Modern Optics

Section-B

4. Electricity and Magnetism

(a) Electrostatics and Magnetostatics

(b) Current Electricity

5. Electromagnetic Theory & Black Body Radiation

(a) Electromagnetic Theory

Physics

(b) Black Body Radiation.

Black Body Radiation and Planck radiation law- Stefan-Boltzmann law, Wien displacement law and Rayleigh-Jeans law. Planck mass, Planck length, Planck time, Planck temperature and Planck energy.

6. Thermal and Statistical Physics.

(a) Thermodynamics

(b) Statistical Physics

Paper-II

Section-A

1. Quantum Mechanics I

2. Quantum Mechanics II & Atomic Physics

(a) Quantum Mechanics II

(b) Atomic Physics

3. Molecular Physics

Physics

Section-B

4. Nuclear Physics

5. Particle Physics & Solid State Physics

(a) Particle Physics

(b) Solid State Physics

Cubic crystal structure. Band theory of solids-conductors, insulators and semiconductors. Elements of superconductivity, Meissner effect, Josephson junctions and applications. Elementary ideas about high temperature superconductivity.

6. Electronics

Political Science and International Relations

Political Science and International Relations - Optional
     of Part B – Main Examination of Civil Services Exam

Paper-I

Political Theory and Indian Politics

Section-A

1. Approaches to the study of political theory: historical, normative and empirical.

5. Theories of Political Culture; Culture and politics in Third World countries.

6. Theories of Political Economy – Classical and contemporary.

Section-B

Indian Government and Politics

1. Indian Nationalism: Dadabhai Naoroji, Tilak, Savarkar, Gandhi, Jayaprakash Narain, Nehru, Subhas Bose, Ambedkar, Ram Manohar Lohia.

3. Socio-economic dimensions of the nationalist movement: The communal question and the demand for partition; backward caste movements. Trade union and Peasant movements, Civil Rights movement.
Political Science and International Relations

6. The Executive System in theory and practice: President, Prime Minister and the Council of Ministers; Governor, Chief Minister and the State Council of Ministers. The Bureaucracy.

7. Role and function of the Parliament and Parliamentary Committee—Lok Sabha and Rajya Sabha; changing socio economic profile.

8. The Supreme Court and the High Courts; Judicial Activism; PIL.

11. Class, caste, ethnicity and gender in Indian politics; politics of regionalism, communalism, backward class and Dalit movements, Tribal people movements, struggle for gender justice.

12. Planning and Economic Development: Role of the Planning Commission; Planning in the era of liberalisation; political dimensions of economic reforms.

Paper-II

Comparative Politics and International Relations

Section-A

Comparative Analysis and International Politics

1. Approaches to the study of comparative politics: traditional approaches; political economy, political sociology or political system approaches; Nature of political process in the Third World.

2. The Modern State: Evolution, the contemporary trends in the advanced industrial countries and the third world.

5. Theories of International politics Marxist, Realist, Systems, Decision-making and Game Theory.
Political Science and International Relations

6. Determinants of foreign policy: Domestic compulsions, geopolitics, geoeconomics and global order.

7. Origin and contemporary relevance of the Cold War, nature of the post-cold war global order.

8. Major issues of world politics: Cuban Missile-Crisis; Vietnam War, Oil Crisis, Afghan Civil War, Gulf War, Collapse of the Soviet Union, Yugoslav Crisis.

9. Non-alignment: Concept and movement; Third World Movements for global justice, Non-alignment in the post cold war era.

10. The evolution of the international economic system – from Bretton woods to WTO, the North-South dimension.

12. Regional, organisations such as the ASEAN, APEC, EU, SAARC, NAFTA.

Section-B

India and the World

1. Indian Foreign Policy: Historical origins, determinants; the institutions of policy-making; continuity and change.

2. India and the Non-Alignment Movement: Evolution and contemporary relevance. Socio-political basis of non-alignment-domestic and global.

3. Major issues in Indian foreign policy: Sino-Indian Border War (1962); Indo-Pakistan War (1971) and the liberation of Bangladesh; IPKF in Sri Lanka; India as military nuclear power (1998).

4. Conflict and co-operation in South Asia: India’s relations with Pakistan, Sri Lanka, Bangladesh, Nepal. Regional co-operation and SAARC. Kashmir question in India’s foreign policy.

5. India’s relation with Africa and Latin America.

6. India and South East Asia; ASEAN.

7. India and the major powers: USA, EU, China, Japan and Russia.

8. India and the UN System: India’s role in UN Peace Keeping and global disarmament.

9. India and the emerging international economic order; multilateral agencies – WTO, IMF, IBRD, ADB.

10. India and the question of nuclear weapons: NPT and CTBT.
Foundation of Psychology

Section-A

1. **Introduction**: Psychology as a Science: Definitions and perspective. Psychology in relation to other social and natural sciences. Use of interdisciplinary approach.

5. **Attention and perception**: Attention – factors, influencing attention including set and characteristics of stimulus. Sensation-concepts of thresholds, absolute and difference thresholds, signal detection and vigilance. Definition and concept of perception, biological factors in perception. Perceptual organisation-influence of past experiences, Perceptual defence-factors influencing. Space and depth perception, size estimation and perceptual readiness.

7. **Memory**: Concepts and definition of memory and forgetting, 7+/-2 concept and clumking Encoding, storage and retrieval. Factors influencing retention and forgetting. Theories of forgetting (Repression, Decay and Interference theories). The concept of reminiscence.

11. **Personality**: Concept and definition of personality. Theories of personality (psychoanalytical, socio-cultural, interpersonal and development, humanistic, behaviouristic, trait and type approaches). Measurement of personality (projective tests, pencil-paper test). The Indian approach to Personality. Training for personality development.

12. **Language and Communication**: Human language-properties, structure and linguistic hierarchy, Language acquisition-predisposition, critical period hypothesis. Theories of language development (Skinner, Chomsky). Process and types of communication. Effective communication and training.

13. **Attitudes, Values and Interests**: Definitions, concepts of attitudes, values and interests. Components of attitudes, values and interests. Formation and maintenance of attitudes. Measurement of attitudes, values and interests. Theories of attitudes and attitudes, changes, strategies for fostering values.

**Paper-II**

**Psychology: Issues and Applications**

**Section-A**

2. **Well being and Mental Disorders**: Concept of health, positive health, well being and ill health. Mental disorders (Anxiety disorders, mood disorders, schizophrenia and delusional disorders; personality disorders, substance abuse disorders). Casual factors in mental disorders. Factors influencing positive health, well being, life style and quality of life.

5. **Application of Psychology to Educational Field**: Psychological principles underlying effective teaching-learning process. Learning styles Gifted, retarded, learning disabled and their training. Training for improving memory and better academic achievement. Personality development and value education, Educational, vocational guidance and Career counselling. Use of Psychological tests in educational institutions.
Psychology

6. Community Psychology: Definition and concept of Community Psychology. Role of community psychologists in social change. Use of small groups in social action. Arousing community consciousness and action for handling social problems. Group decision making and leadership for social change.

Section-B

8. Application of Psychology to disadvantaged groups: The concepts of disadvantaged, deprivation and socially deprived. Social, physical, cultural and economic consequences of disadvantaged and deprived groups. Educating and motivating the disadvantaged towards development.

10. Application of psychology in Information Technology and Mass media: The present scenario of information technology and the mass media boom and the role of psychologists. Selection and training of psychology professionals to work in the field of IT and mass media. Distance learning through IT and mass media. Entrepreneurship through e-commerce. Multilevel marketing. Impact of TV and fostering value thorough IT and mass media. Psychological consequences of recent developments in Information Technology.

11. Application of Psychology in the field of Defence: The concept of Military psychology, Aviation psychology and Psychological warfare Role of Military psychologists in the defence. Selection, recruitment and training of personnel. Facilitating the process of adjustment of personnel to military life Role of Counselling. Devising Psychological tests for defence personnel. Psychological disorders due to war. Human engineering in Defence.

Public Administration - Optional
of Part B – Main Examination of Civil Services Exam

Paper-I

Administrative theory

Section-A

III. Structure of public organisations: Typologies of Political Executive and their functions. Forms of public organisations: Ministries and Departments: Corporations; Companies, Boards and Commissions; Adhoc and Advisory bodies. Headquarters and field relationship.

IV. Administrative Behaviour: Decision making with special reference to Herbert Simon, theories of Leadership, Communication, Morale, Motivation (Mellow and Herzberg).

V. Accountability and Control: Concepts of Accountability an Control; Legislative Executive and Judicial Control over Administration. Citizen and Administration, Role of civil society, people’s participation, Right to information. Administrative corruption, machinery for redressal of citizens’ grievances. Citizens Charter.

Section-B

VIII. Comparative Public Administration: Meaning, nature and scope, Models of Comparative Public Administration: Bureaucratic and ecological.

IX. Development Administration: Origin and purpose. Rigg’s Prismatic-Sala Model; Bureaucracy and Development; Changing profile of Development Administration; new directions in peoples’s self development and empowerment.

Public Administration

XI. Personal Administration: Objectives of Personnel Administration. Importance of human resource development. Recruitment, training, career development, position classification, discipline, performance appraisal, promotion, pay and service conditions; employer-employee relations, grievance redressal mechanism integrity and code of conduct.

Paper-II

Indian Administration

Section-A

1. Evolution of Indian Administration: Kautilya, Mughal period, British legacy.

3. Union Government and Administration: President Prime Minister, Council of Ministers, Cabinet committees, Cabinet Secretariat, Prime Minister’s Office, Central Secretariat, Ministries and Departments, Advisory Bodies, Boards and Commissions, Field Organisations.

4. State Government and Administration: Governor, Chief Minister, Council of Ministers, Chief Secretary, State Secretariat Directorates.

7. Public Sector: Forms of public undertakings. Their contribution to the economy; problems of autonomy and accountability. Changing role of the Public Sector in the context of liberalisation.

Section-B

11. **Machinery for Planning**: Role, composition and review of functions of the Planning Commission; Role of the National development Council. Process of Plan formulation at Union and State levels. Decentralised planning.

12. **Administration of Law and Order**: Role of Central and State Agencies in maintenance of law and order. Criminalisation of politics and administration.

General Sociology/Foundations of Sociology/Fundamentals of Sociology

1. Sociology The Discipline:

Sociology as a science and as an interpretative discipline, impact of industrial and French Revolution on the emergence of sociology; sociology and its relationship with history, economics, political science, psychology and anthropology.

2. Scientific Study of Social Phenomena:

Problem of objectivity and value neutrality; issue of measurement in social science; elements of scientific method-concepts, theory and fact, hypothesis, research designs-descriptive, exploratory and experimental.

3. Techniques of data collection and analysis:

Participant and quasi-participant observation; interview, questionnaire and schedule case study, sampling-size, reliability and validity, scaling techniques-social distance and Likert scale.

4. Pioneering contributions to Sociology:

   a) Karl Marx: Historical materialism, mode of production, alienation and class struggle.
   b) Emile Durkheim: Division of labour, social fact, religion and society.
   c) Max Weber: Social action, ideal types, authority, bureaucracy, protestant ethic and the spirit of capitalism.
   d) Talcott Parsons: Social systems, pattern variables.
   e) Robert K. Merton: Latent and manifest functions, anomie, conformity and deviance, reference groups.

5. Marriage and Family:

Types and forms of marriage, family-structure and function; personality and socialisation; Social control; family, lineage, descent and property; changing structure of family marriage and sex roles in modern society; divorce and its implications; gender issues; role conflicts.

6. Social Stratification:

Concepts-hierarchy, inequality and stratification; theories of stratification-Marx, Davis and Moore and Melvin Tumin’s critique, forms and functions; class-different conceptions of class; class in itself and class for itself; caste and class; caste as a class.

7. Social Mobility:

Types of mobility-open and closed models; intra and inter-generational mobility; vertical and horizontal mobility; social mobility and social change.
Sociology

8. Economic System:

Sociological dimensions of economic life, the impact of economic processes on the larger society; social aspects of division of labour and types of exchange; features of pre-industrial and industrial economic system; industrialisation and social change; social determinants of economic development.

9. Political System:

The nature of power-personal power, community power, power of the elite, class power, organisational power, power of the un-organised masses; authority and legitimacy; pressure groups and political parties; voting behaviour; modes of political participation-democratic and authoritarian forms.

10. Educational System:

Education and Culture; equality of educational opportunity; social aspects of mass education; problems of universalisation of primary education; role of community and state intervention in education; education as an instrument of social control and social change; education and modernisation.

11. Religion:

Origins of religious beliefs in pre-modern societies; the sacred and the profane; social functions and dysfunctions of religion; monistic and pluralistic religion; organised and unorganised religions; Semitism and anti-Semitism; religion sect and cults; magic; religion and science.

12. Science and Technology;

Ethos of science; social responsibility of science; social control of science; social consequences of science and technology; technology and social change.

13. Social Movements:

Concepts of social movements; genesis of social movements; ideology and social movement; social movement and social change; types of social movements.

14. Social change and Development:

Continuity and change as fact and as value: theories of social change-Marx, Parsons and Sorokin; directed social change; social policy and social development.

Paper-II

Study of Indian Society

1. Historical Moorings of the Indian Society:

Traditional Hindu social organisation; socio-cultural dynamics through the ages; impact of Buddhism, Islam, and the West, factors in continuity and change.
2. Caste System:

Origin of the caste system; cultural and structural views about caste; mobility in caste; caste among Muslims and Christians; change and persistence of caste in modern India; issues of equality and social justice; view of Gandhi and Ambedkar on caste; caste on and Indian polity; Backward Classes Movement; Mandal Commission Report and issues of social backwardness and social justice; emergence of Dalit consciousness.

3. Class Structure:

Class Structure in India. Agrarian and industrial class structure; emergence of middle class; emergence of classes among tribes; elite formation in India.

4. Marriage, Family and Kinship:

Marriage among different ethnic groups, its changing trends and its future; family-its structural and functional aspects its changing forms; regional variations in kindship systems and its socio-cultural correlates; impact of legislation and socio-economic change on marriage and family; generation gap.

5. Agrarian Social Structure:

Peasant Society and agrarian systems; land tenure systems historical perspectives, social consequences of land reforms and green revolution, feudalism semi feudalism debates; emerging agrarian class structure; agrarian unrest.

6. Industry and Society:

Path of industrialisation, occupational diversification, trade unions and human relations; market economy and its social consequences; economic reforms liberalisation, privatisation and globalisation.

7. Political Processes:

Working of the democratic political system in a traditional society; political parties and their social base; social structural origins of political elites and their orientations; regionalism, pluralism and national unity; decentralisation of power; panchayati raj and nagarpalikas and 73rd and 74th constitutional amendments.

8. Education:

Directive Principles of State Policy and primary education; education; educational inequality and change; education and social mobility; the role of community and state intervention in education; universalisation of primary education; Total Literacy Campaigns; educational problems of disadvantages groups.

9. Religion and Society:

Size, growth and regional distribution of different religious groups; educational levels of different groups; problems of religious minorities; communal tensions; secularism; conversions; religious fundamentalism.

10. Tribal Societies:

Distinctive features of tribal communities and their geographical spread; problem of tribal communities-land alienation, poverty, indebtedness, health and nutrition, education; tribal development efforts after independence; tribal policy isolation, assimilation and integration; issues of tribal identity.
Sociology

11. Population Dynamics:
Population size, growth, composition and distribution; components of population growth; birth rate, death rate and migration; determinants and consequences of population growth; issues of age at marriage, sex ratio; infant mortality rate; population policy and family welfare programmes.

12. Dimensions of Development:
Strategy and ideology of planning; poverty, indebtedness and bonded labour; strategies of rural development-poverty alleviation programmes; environment, housing, slums, and unemployment, programmes for urban development.

13. Social Change:
Endogenous and exogenous sources of change and resistance to change; processes of change-sanskritisation and modernisation; agents of change-mass media, education and communication; problems of change and modernisation; structural contradictions and breakdown.

14. Social Movements:

Peasant Movements: Kisan Sabha, Telengana, Naxalbari.

Backward Castes Movement: Self-respect Movement, backward castes mobilisation in North India.

15. Women and Society:
Demographic profile of women; special problems-dowry, atrocities, discrimination, existing programmes for women and their impact. Situational analysis of children; child welfare programmes.

16. Social Problems:
Prostitution, AIDS, alcoholism, drug addiction, corruption.
Statistics - Optional
of Part B – Main Examination of Civil Services Exam

Paper-I

Probability

Sample space and events, probability measure and probability space, random variable as a measurable function,, distribution function of a random variable, discrete and continue-type random variable probability mass function, probability density function, vector-valued random variable, marginal and conditional distributions, stochastic independence of event and of random variables, expectation and moments of a random variable, conditional expectation, convergence of a sequence of random variable in distribution, in probability, in p-th mean and almost everywhere, their criteria and inter-relations, Borel-Cantelli lemma, Chebyshev's and Khinchine's weak laws of large numbers, strong law of large numbers and kollmogorov's theorems, Glivenko-Cantelli theorem, probability generating function, characteristic function, inversion theorem, Laplace transform, related uniqueness and continuity theorems, determination of distribution by its moments. Linderberg and Levy forms of central limit theorem, standard discrete and continuous probability distributions, their inter-relations and limiting cases, simple properties of finite Markov chains.

Statistical Inference

Non-randomised and randomised tests, critical function, MP tests, Neyman-Pearson lemma, UMP tests, monotone likelihood ratio, generalised Neyman-Pearson lemma, similar and unbiased tests, UMPU tests for single and several-parameter families of distributions, likelihood rotates and its large sample properties, chi-square goodness of fit test and its asymptotic distribution.

Confidence bounds and its relation with tests, uniformly most accurate(UMA) and UMA unbiased confidence bounds.

Kolmogorov’s test for goodness of fit and its consistency, sign test and its optimality. Wilcoxon signed ranks test and its consistency, Kolmogorov-Smirnov two-sample test, run test, Wilcoxon-Mann-Whitney test and median test, their consistency and asymptotic normality.

Wald’s SPRT and its properties, OC and ASN functions, Wald’s fundamental identity, sequential estimation.
Statistics

Linear Inference and Multivariate Analysis

Linear statistical models’, theory of least squares and analysis of variance, Gauss-Markoff theory, normal equations, least squares estimates and their precision, test of significance and interval estimates based on least squares theory in one-way, two-way and three-way classified data regression analysis, linear regression, curvilinear regression and orthogonal polynomials, multiple regression, multiple and partial correlations, regression diagnostics and sensitivity analysis, calibration problems, estimation of variance and covariance components, MINQUE theory, multivariate normal distribution, Mahalanobis; D2 and Hotelling’s T2 statistics and their applications and properties, discriminant analysis, canonical correlations, one-way MANOVA, principal component analysis, elements of factor analysis.

Sampling Theory and Design of Experiments

An outline of fixed-population and super-population approaches, distinctive features of finite population sampling, probability sampling designs, simple random sampling with and without replacement, stratified random sampling, systematic sampling and its efficacy for structural populations, cluster sampling, two-stage and multi-stage sampling, ratio and regression, methods of estimation involving one or more auxiliary variables, two-phase sampling, probability proportional to size sampling with and without replacement, the Hansen-Hurwitz and the Horvitz-Thompson estimators, non-negative variance estimation with reference to the Horvitz-Thompson estimator, non-sampling errors, Warner’s randomised response technique for sensitive characteristics.

Fixed effects model (two-way classification) random and mixed effects models (two-way classification per cell), CRD, RBD, LSD and their analyses, incomplete block designs, concepts of orthogonality and balance, BIBD, missing plot technique, factorial designs : 2n, 32 and 33, confounding in factorial experiments, split-plot and simple lattice designs.

Paper-II

I. Industrial Statistics

Process and product control, general theory of control charts, different types of control charts for variables and attributes, X, R, s, p, np and c charts, cumulative sum chart, V-mask, single, double, multiple and sequential sampling plans for attributes, OC, ASN, AOQ and ATI curves, concepts of producer’s and consumers’ risks, AQL, LTPD and AOQL, sampling plans for variables, use of Dodge-Romig and Military Standard tables.

Concepts of reliability, maintainability and availability, reliability of series and parallel systems and other simple configurations, renewal density and renewal function, survival models (exponential), Weibull, lognormal, Rayleigh, and bath-tub), different types of redundancy and use of redundancy in reliability improvement.

Problems in life-testing, censored and truncated experiments for exponential models.

II. Optimization Techniques

Different, types of models in Operational Research, their construction and general methods of solution, simulation and Monte-Carlo methods, the structure and formulation of linear programming (LP) problem, simple LP model and its graphical solution, the simplex procedure, the two-phase method and the M-technique with artificial variables, the duality theory of LP and its economic interpretation, Sensitivity
Statistics

analysis, transportation and assignment problems, rectangular games, two-person zero-sum games, methods of solution (graphical and algebraic)

Replacement of failing or deteriorating items, group and individual replacement policies, concept of scientific inventory management and analytical structure of inventory problems, simple models with deterministic and stochastic demand with and without lead time, storage models with particular reference to dam type.

Homogeneous discrete-time Markov chains, transition probability matrix, classification of states and ergonic theorems, homogeneous continuous-time Markov chains, Poison process, elements of queuing theory, $M/M/1$, $M/M/K$, $G/M/1$ and $M/G/1$ queues.

Solution of statistical problems on computers using well known statistical software packages like SPSS.

III. Quantitative Economics and Official Statistics

Determination of trend, seasonal and cyclical components, Box-Jenkins method, tests for stationery of series, ARIMA models and determination of orders of autoregressive and moving average components, forecasting.

Commonly used index numbers-Laspeyre’s, Paashe’s and Fisher’s ideal index numbers, chain-base index number uses and limitation of index numbers, index number of wholesale prices, consumer price index number, index numbers of agricultural and industrial production, test for index numbers like proportionally test, time-reversal test, factor-reversal test, circular test and dimensional invariance test.

General linear model, ordinary least squares and generalised least squares methods of estimation, problem of multicollinearity, consequences and solutions of multicollinearity, autocorrelation and its consequences, heteroscedasticity of disturbances and its testing, test for independence of disturbances, Zellner’s seemingly unrelated regression equation model and its estimation, concept of structure and model for simultaneous equations, problem of identification-rank and order conditions of identifiability, two-stage least squares method of estimation.

Present official statistical system in India relating to population, agriculture, industrial production, trade and prices, methods of collection of official statistics, their reliability and limitation and the principal publications containing such statistics, various official agencies responsible for data collection and their main functions.

IV. Demography and Psychometry

Demographic data from census, registration, NSS and other surveys, and their limitation and uses, definition, construction and uses of vital rates and ratios, measures of fertility, reproduction rates, morbidity rate, standardised death rate, complete and abridged life tables, construction of life tables from vital statistics and census returns, uses of life tables, logistic and other population growth curves, lifting a logistic curve, population projection, stable population quasi-stable population techniques in estimation of demographic parameters, morbidity and its measurement, standard classification by cause of death, health surveys and use of hospital statistics.

Methods of standardisation of scales and tests, Z-scores, standard scores, T-score, percentile scores, intelligence quotient and its measurement and uses, validity of test scores and its determination, use of factor analysis and path analysis in psychometry.
Zoology

Zoology - Optional
of Part B – Main Examination of Civil Services Exam

Paper-I

Section-A

1. Non-chordata and chordate:

(a) Classification and relationship of various phyla upto sub-classes; Acoelomata and Coelomata; Protostomes and Deuterostomes, Bilateralia and Radiata; Status of Protista, Parazoa, Onychophora and Hemichordata; Symmetry.

(b) Protozoa: Locomotion, nutrition, reproduction; evolution of sex; General features and life history of Paramaecium, Monocystic, Plasmodium and Leishmania.

(c) Porifera: Skeleton, canal system and reproduction.

(d) Coelenterata: Polymorphism, defensive structures and their mechanism; coral reefs and their formation; metagenesis; general features and life history of Obelia and Aurelia.

(e) Platyhelminthes: Parasitic adaptation; general features and life history of Fasciola and Taenia and their relation to man.

(f) Nematelminthes: General features, life history and parasitic adaptation of Ascaris; nemathelminths in relation to man.

(g) Annelida: Coelom and metamerism; modes of life in polychaetes; general features and life history of nereis (Neanthes), earthworm (Pheretima) and leach (Hirudinaria).

(h) Arthropoda: Larval forms and parasitism in Crustacea; vision and respiration in arthropods (prawn, cockroach and scorpion); modification of mouth parts in insects (Cockroach, mosquito, housefly, honey bee and butterfly); metamorphosis in insects and its hormonal regulation; social organisation in insects (termites and honey bees).

(i) Mollusca: Feeding, respiration, locomotion, shell diversity; general features and life history of Lamellidens, Pila and Sepia, torsion and detorsion in gastropods.

(j) Echinodermata: Feeding, respiration, locomotion larval forms; general features and life history of Asterias.

(k) Protochordata: Origin of chordates; general features and life history of Branchiostoma and Herdamania.

(l) Pisces: Scales, respiration, locomotion, migration.

(m) Amphibia: Origin of tetrapods; parental care, paedomorphosis.

(n) Reptilia: Origin of reptiles; skull types; status of Sphenodon and crocodiles.

(o) Aves: Origin of birds; flight adaptation, migration.
Zoology

(p) *Mammalia*: Origin of mammals; definition; general features of egg-laying mammals, pouched-mammals, aquatic mammals and primates; endocrine glands and other hormone producing structures (pituitary, thyroid, parathyroid, adrenal, pancreas, gonads) and their interrelationships.

(q) Comparative functional anatomy of various systems of vertebrates (integument and its derivatives, endoskeleton, locomotory organs, digestive system, respiratory system, circulatory system including heart and aortic arches; urino-genital system, brain and sense organs (eye and ear).

Section-B

I. Ecology:

(a) Biosphere: Biogeochemical cycles, green-houses effect, ozone layer and its impact; ecological succession, biomes and ecotones.

(b) Population, characteristics, population dynamics, population stabilization.

(c) Conservation of natural resources – mineral mining, fisheries, aquaculture; forestry; grassland; wildlife (Project Tiger); sustainable production in agriculture-integrated pest management.

(d) Environmental biodegradation; pollution and its impact on biosphere and its prevention.

II. Ethology:

(a) Behaviour: Sensory filtering, responsiveness, sign stimuli, learning, instinct, habituation, conditioning, imprinting.

(b) Role of hormones in drive; role of pheromones in alarm spreading; crypsis, predator detection, predator tactics, social behaviour in insects and primates; courtship (Drosophila, 3-spine stickleback and birds).

(c) Orientation, navigation, homing; biological rhythms; biological clock, tidal, seasonal and circadian rhythms.

(d) Methods of studying animal behaviour.

III. Economic Zoology:

(a) Apiculture, sericulture, lac culture, carp culture, pearl culture, prawn culture.

(b) Major infectious and communicable diseases (small pox, plague, malaria, tuberculosis, cholera and AIDS) their vectors, pathogens and prevention.

(c) Cattle and livestock diseases, their pathogens (helminths) and vectors (ticks, mites, Tabanus, Stomoxys).

(d) Pests of sugar cane (Pyrilla perpusiella), oil seed (Achaea janata) and rice (Sitophilus oryzae)
Zoology

IV. Biostatistics:

Designing of experiments; null hypothesis; correlation, regression, distribution and measure of central tendency, chi square, student t-test, F-test (one-way & two-way F-test).

V. Instrumental methods:

(a) Spectrophotometry, flame photometry, Geiger-Muller counter, scintillation counting.

(b) Electron microscopy (TEM, SEM).

Paper-II

Section-A

I. Cell Biology:

(a) Structure and function of cell and its organelles (nucleus, plasma membrane, mitochondria, Golgi bodies, endoplasmic reticulum, ribosomes and lysosomes), cell division (mitosis and meiosis), mitotic spindle and mitotic apparatus, chromosome movement.

(b) Watson-Crick model of DNA, replication of DNA, protein synthesis, transcription and transcription factors.

II. Genetics:

(a) Gene structure and functions; genetic code.

(b) Sex chromosomes and sex determination in Drosophila, nematodes and man.

(c) Mendel’s laws of inheritance, recombination, linkage, linkage-maps, multiple alleles, cistron concept; genetics of blood groups.

(d) Mutations and mutagenesis: radiation and chemical.

(e) Cloning technology, plasmids and cosmids as vectors, transgenics, transposons, DNA sequence cloning and whole animal cloning (Principles and methodology).

(f) Regulation and gene expression in pro-and eu-karyotes.

(g) Signal transduction; pedigree-analysis; congenital diseases in man.

(h) Human genome mapping; DNA finger-printing.

III. Evolution:

(a) Origin of life.

(b) Natural selection, role of mutation in evolution, mimicry, variation, isolation, speciation.

(c) Fossils and fossilization; evolution of horse, elephant and man.
Zoology

(d) Hardy-Weinberg Law, causes of change in gene frequency.

(e) Continental drift and distribution of animals.

IV. Systematics:

(a) Zoological nomenclature; international code; cladistics.

Section-B

I. Biochemistry:

(a) Structure and role of carbohydrates, fats, lipids, proteins, aminoacids, nucleic acids, saturated and unsaturated fattyacids, cholesterol.

(b) Gluoclysis and Krebs cycle, oxidation and reduction, oxidative phosphorylation; energy conservation and release, ATP, cyclic AMP-its structure and role.

(c) Hormone classification (steroid and peptide hormones), biosynthesis and function.

(d) Enzymes: types and mechanisms of action; immunoglobulin and immunity; vitamins and co-enzymes.

(e) Bioenergetics.

II. Physiology (with special reference of mammals)

(a) Composition and constituents of blood; blood groups and Rh factor in man; coagulation, factors and mechanism of coagulation; acid-base balance, thermo regulation.

(b) Oxygen and carbon-dioxide transport; haemoglobin: constituents and role in regulation.

(c) Nutritive requirements; role of salivary glands, liver, pancreas and intestinal glands in digestion and absorption.

(d) Excretory products; nephron and regulation of urine formation; osmoregulation.

(e) Types of muscles, mechanism of contraction of skeletal muscles.

(f) Neuron, nerve impulse- its conduction and synaptic transmission; neurotransmitters.

(g) Vision, hearing and olfaction in man.

(h) Mechanism of hormone action.

(i) Physiology of reproduction, role of hormones and pheromones.
III. Developmental Biology

(a) Differentiation from gamete to neurula stage; dedifferentiation; metaplasia, induction, morphogenesis and morphogen; fate maps of gastrulae in frog and chick; organogenesis of eye and heart, placenation in mammals.

(b) Role of cytoplasm in and genetic control of development; cell lineage; causation of metamorphosis in frog and insects; paedogenesis and noeteny; growth, degrowth and cell death; ageing; blastogenesis; regeneration; teratogenesis; neoplasia.

(c) Invasiveness of placenta; in vitro fertilization; embryo transfer, cloning.

(d) Baer's law; evo-devo concept.
